laser eye surgery

Considering Laser Eye Surgery?

Nothing compares to the clarity of vision that can be achieved with the technology and expertise that Advanced Vision Care can offer. Should you be short or far sighted, you can benefit from a trip to Advanced Vision Care (AVC). Even if you've been turned down for laser eye treatment in the past, AVC will still be able to offer you a solution. The techniques they use remove less tissue from the eye and so patients are not only at less risk, but they are more likely to be accepted for the procedure. You don't know until you ask after all.

About Advanced Vision Care

Advanced Vision Care is one the leading UK laser eye surgery clinics. Located on the esteemed Harley Street in London, they carry out their work to the very highest of modern standards. They only ever use modern, state of the art equipment and only employ the most prestigious surgeons to work in their clinic. This is all for the absolute satisfaction of the client.

AVC is renowned for their customer after care. The whole experience from the corrective eye surgery, to the after care and support, is designed to be not just a relaxing, but an enjoyable one. They really do go the extra mile for their customers to ensure that their eyesight is at perfect clarity.

Lasik(Laser Assisted Subepithelial Keratectomy) and Lasek (Laser Epithelial Keratomilieusis)

With similar names, these two types of surgery can often get confused with one another. It's important to know the differences between the two before you make the decision for one or the other.

Lasik eye surgery is perhaps the more popular option. It has been available for around 18 years now and is considered the most comfortable option. It is also the quickest of all forms of laser eye surgery.

Lasek eye surgery is often undertaken when the patient is unsuitable for Lasik due to having too thin corneas. It is a mixture of positive features from both PRK (Photorefractive Keratectomy) and LASIK procedures.
