An outlook on the Industrial reclaim rubber sector by Deepti

Article published on May 8th 2012 | Business

The wide sector of industrial reclaim rubber products covers essentially all types of rubber-related manufacturing. It is one of the most diversified sectors in the rubber industry contributing to the production of rubber products like hoses, belts, extruded profiles, sheeting, roofing, films, vibration isolation tools and machines, geomembranes, roll coverings, fuel cells, foamed insulation sheets/tubes, o-rings, footwear, diaphragms, gaskets and many more. Due to such an extensive diversity in the applications of industrial reclaim rubber products, this sector holds a wide spectrum of needs ranging from the common properties like strength to dynamic properties, friction coefficient, fluid resistance penetration, conductivity and more.

Moreover, there are several types of rubber polymers which are utilized in the rubber manufacturing sector. The reclaim rubber industry of India has highly progressed in the recent times and today there are scores of rubber manufacturers operating their successful reclamation plants in different parts of the country. The Indian rubber manufacturers produce reclaimed rubber from tread peelings, scrap tyres, moulded rubber items, natural rubber as well as butyl tubes for different applications on both tyre rubber products and non-tyre rubber items. Further, there are a number of processes which the manufacturers employ to produce reclaim rubber. Some of the thermal processes include digester process, engelke process, alkaline process, heater process/pan process, neutral process, high pressure steam process and continuous or incessant steam process. Likewise, there are also some thermo mechanical processes and mechano-chemical processes which are used to manufacture reclaimed rubber.

To carry out all these process they have reclamation plants outfitted with highly sophisticated machinery which makes the production extremely quick and refined. With the use of such highly advanced processes and machines the Indian manufacturers have earned a great reputation at the global front. Today, India is one of the leading exporters of reclaim rubber in the world and export it to countries like United states of America, Japan, Germany, Sri Lanka and many others. Thus, it wonâ€™t be wrong to say that in the strengthening foothold of the India rubber industry, Indian manufacturers have plays a significant role.

There are some more reasons which have contributed in the progress of the industrial reclaimed rubber sector of India such as its affordability, environment friendliness etc. As it is made using recyclable rubber materials which pose no danger to the environment, it makes an ideal choice for the companies who wish to produce rubber products causing no harm to the nature. Moreover, as in India there is huge production of recycled rubber every year owing to cheap labor, wide availability of raw materials and other favorable conditions, thus it has become one of the best places for the international buyers who are looking to buy rubber at affordable rates. This way the Indian reclaim rubber manufacturers apart from meeting the needs of the domestic industrial sector of rubber products also serve the needs of the international market. The amazing part is that this sector is continuously evolving at an alarming rate which implies that the future prospects are also quite high.
