Chevy Volt in Bay Area- the Feature Rich Car That Revolutionize the Automobile Industry by Rossey Corell

Article published on December 2nd 2011 | Business

Are you interested in making a purchase of new futuristic Chevy Volt in Bay Area? The new high-street series hybrid range electric vehicle Chevy Volt 2012 combines convenience, safety, comfort exuding class performance. Being an innovative wonder in the auto industry, Chevy Volt 2012 has not only revolutionized the automobile industry but also makes driving truly a great experience. With sophisticated design, upscale look and refined safety features the promising car really lets customers analyze the potential success of the Chevy Volt. Letâ€™s have a view to some of the features of Chevy Volt 2012 that makes it so different from others.

Maximum fuel savings: The Chevy Volt 2012 is Chevyâ€™s much awaited new plug-in battery/gasoline hybrid featuring an electric only mode. The fuel efficient car saves good fuel costs based upon a daily travel of 40 miles. This indicates the maximum fuel savings, since there is no requirement of gasoline, when the car is driven a distance of 40 miles a day. The gasoline backed inline-4 engine basically supplies electricity to the motor for as many as 300 extra miles. Well, not only it takes good care of gas savings, but also take into c consideration the eco-friendly matters. It produces zero emissions when a driver tends to drive gas free and thus ensures ecological balance.

Vehicle Size and Comfort: The Chevy Volt in Bay Area is primarily a four-seater, four-door "series-parallel plug-in hybrid". Just like the external, the volt has got interior with a flow of its own. What is so unique is that it features a full center console along with sporty bucket seats for four. The vehicle has got a trunk size of 10.6 cubic feet. To talk about the safety features of Chevy Volt in Bay Area, the car features antilock brakes, front side airbags, stability control, full-length side curtain airbags, full knee airbags and more.

Performance: The Chevy Volt and its technological promise canâ€™t be denied. It runs at a speed of 100mph and has got equivalence of 150 horsepower engine. The wonder car is expected to go from 0 to 60 mph in 8.5 seconds. It keeps on going when the battery runs down. As because the lithium-ion batteries pack is mounted, the car includes a very low center of gravity, bringing a sporty feel around the car. What deserves special mentioning about Chevy Volt is that it accelerates from a stable position and works pretty responsively at moderate speed as well.

Electricity costs: Volt drivers use 8kw-h energy when it takes to driving 40 miles. Most importantly how long you drive routinely will play a vital role in determining how thrifty the Volt will be. It is expected that most potential owners feel the benefit of taking advantage of its electric range. The charging through standard 120-volt outlet will require up to 6.5 hours while the application of 240-volt charge station is known to cut the charging time to three hours. The electricity costs related to recharging are just a fraction for the equivalent amount of gasoline.

So, what else do you want? Just flip through the above mentioned features and feel confident while making your purchase of Chevy Volt in Bay area.
