Electronic Medical Records - Facilitating Health Care Services with Their Benefits by Activemds

Article published on February 14th 2012 | Business

Wikipedia defines an Electronic Medical Record as - â€œA computerized medical record created in an organization that delivers care, such as in a hospital or physician's office. Electronic medical records tend to be a part of a local stand-alone health information system that allows storage, retrieval and modification of records.â€•

These have been redesigned to fit the requirements of the fast-paced informational age. They offer convenience and accessibility to medical facilities around the globe. The section below discusses the benefits of these electronic records in the field of healthcare services -

1. They provide good speed in managing information, which can enhance the competency levels of any healthcare facility. An electronic medical record system requires lesser time in order to find the details about any patient; this saved time can be used for serving the patients better.

2. Storage is also an important function of a medical record system as it efficiently replaces the conventional methods of storing information about patients. It is possible to store numerous electronic medical records at multiple locations with easy retrievals.

3. An electronic medical record system has adequate backup, in order to tackle any emergencies. Adequate measures are taken to prevent them from any types of viruses and prevented access by unauthorized individuals.

4. These records also offer accessibility that means that it is easy to access these records from any location and download it on any device at a remote location.

5. With an increasing focus on time and money saving technology, these electronic record-keeping systems help to save money, with low overhead costs and hence offer affordability.

6. This simple record maintaining system eliminates the requirement of extensive information technology infrastructure and reorganization of various databases, as it operates through a single database that can be accessed at multiple locations.

7. These records bring more manageability and efficiency for any healthcare organization, therefore a good record keeping software is helpful and has user-friendly operations.

8. This data management system also helps to eliminate the errors, which are encountered in conventional medical record keeping. In a recent survey by Accenture, around 92% of the respondents agreed to the facts that switching to the electronic record system will reduce the errors made in health care.
