A Cost Effective Way of Heating Your Swimming Pool by James Blee

Article published on March 14th 2012 | Business

If you are having a swimming pool and worried about installing a heating system then solar pool heater will be the best idea. These modern systems of pool heating circulates the pool water through a large heat exchange surface thereby maintaining an appropriate temperature which gives a soothing effect while swimming and makes you stay for longer hours in water. These large heat exchangers which form the base of the solar pool heaters can be installed on the terrace of your house giving them the maximum exposure to sun rays.

Most of these solar heat exchangers are flat black panels constructed from high technology plastics which are weather proof and can resist the strong ultraviolet radiation from the sun. A major advantage of using these types of pool heaters is that they are economical and have no operating costs. Secondly, solar energy is renewable and non-polluting to the environment..

Unlike the conventional type of solar pool heater where you can set a defined temperature as per your requirement these solar pool heaters can heat the pool water to a temperature depending on the intensity of the sun rays. It is true that the expenses for installing these type of heaters is costly but it does have a lifespan of minimum 20 years approximately and at the same time saves you from paying too much for the fuel costs. If you are installing these heaters for your swimming pool remember that South facing solar systems require lesser panels in comparison to systems facing East or West.

According to the season, you need to add extra solar panels because additional heat is needed during the winter months in comparison to summers. You can indefinitely reduce the pool heating costs by installing these types of heaters. So in case if youâ€™re planning to provide a heating system to your swimming pool or thinking of changing your pool heating system then just give a thought about these solar heaters as they have low annual operating cost.
