# Using Third Party Verification

by Dexter Felton

Article published on February 29th 2012 | Internet

Businesses today have many options when working on ensuring the identity of their clients. Using third party verification of information is very important to insure that the information you receive is correct. Options for this type of service are varied today.Third party verification will require the use of a variety of types of information. The one most commonly used is a telephone validation process. Using this procedure the client enters their telephone number into the website. A call is then placed to that number which will contain information regarding how to proceed. The client follows those steps and the verification is complete.The object of using third party verification is to protect the personal and financial data of others including the business using the program. Fraudulent information that is used to pay for services or products results in a lost to the business. For larger businesses, this can lead to a substantial loss on gross profit.Today those who are trying to use stolen information for their own personal gain are working on various methods of circumventing any type of security system that might be used. As the hackers find methods to avoid detection from the current processes, new processes must be created to halt the hackerâ€™s progress.As a result of the changes, third party verification is quickly becoming the most effective way to protect the information and the integrity of any website. It is well kBusinesses today have many options when working on ensuring the identity of their clients. Third party verification will require the use of a variety of types of information. The one most commonly used is a telephone validation process. Using this procedure the client enters their telephone number into the website. A call is then placed to that number which will contain information regarding how to proceed. The client follows those steps and the verification is complete.

The object of using third party verification is to protect the personal and financial data of others including the business using the program. Fraudulent information that is used to pay for services or products results in a lost to the business. For larger businesses, this can lead to a substantial loss on gross profit.

Today those who are trying to use stolen information for their own personal gain are working on various methods of circumventing any type of security system that might be used. As the hackers find methods to avoid detection from the current processes, new processes must be created to halt the hackerâ€™s progress.

As a result of the changes, third party verification is quickly becoming the most effective way to protect the information and the integrity of any website. It is well known that as the programs used to stop the hackers become more effective, the hackers then look for new ways to get around the protective barrier that has been created.

Third party verification might use automated telephone calls or other options for confirming the identity of the person who is placing an order on a website. Options for the use of these programs are quite extensive. Protecting the information and personal data that is often stored on the website is very important today.

As an organization implements newer, more effective methods to protect the financial data of their clients, customers might find they need to take an additional step to complete an order. However, the additional step is so small that they hardly even notice that they are required to do so. Additionally those that may find that added step a bit inconvenient quickly realize that the added

security is far more beneficial than the slight inconvenience they might experience.
