We cannot think of any better alternative than Ambulances in case of medical emergencies flight. Ambulances play a major role in saving the patients life in time. Well this is possible in the city limits where the accident spot or place can be reached conveniently by road. But what about the areas like mountains, deep forests, sea, isolated places wherein ambulances are not reachable. Every human being has the right to live, if he is having any emergency at a location without the reach of an Ambulance. We cannot let the individual die in pain. After all thatâ€™s not being human. If there is an emergency in such places how would you tackle it? The answer to such crises is â€œAir Ambulanceâ€•.

What is Air Ambulance?

Air Ambulance is a dedicated ambulance designed to reach out to isolated locations where other Ambulances are unable to reach. It is a highly equipped aircraft with all the medical facilities in case of grave emergencies. The services of Air ambulance can be availed twenty four hours a day. Air ambulances also have well experienced and efficient medical staff especially trained to handle medical emergencies. These aircraft are equipped with all the necessary medical equipments like stretchers, ventilators, anesthesia, ECG, medicines and much more. Medical staff like, the medical technicians, nurses, respiratory therapist, surgeon, trauma specialists and much more are usually present in this emergency medical flight. The medical staffs serving in emergency medical flights are picked from best in the medical industry to provide maximum medical attention to accident

victims. The pilots flying the air ambulance also have to go through rigorous training for a longer period than the usual pilots for non medical flights.

When the services of Air ambulances where introduced and available for the common man. It

used to serve the purpose to reach out to people in isolated locationsand get them to the nearest hospitals but this was not serving the purpose of saving lives of people in time. Many of the injured usually lost their lives in flight while traveling to the hospital. This has encouraged hospitals and medical centers to introduce a fully equippedAir ambulance. irambulances were extensively used in armed forces to carry injured soldiers and give them immediate medical attention. Soon private and government medical agencies realized the advantages and made it available for the general public. Evacuating patients or accident victims through air evacuation by air ambulance can cost you on a higher side but there is no substitute than to save life of your loved ones. If money you spend can get immediate medical attention in remote areas, than itâ€™s certainly worth it.

Air ambulance is responsible for saving hundreds of lifeâ€™s in case of natural calamities and accidents spots unreachable for the regular ambulance services. This has certainly been a boon to people who thought that their end was near in extreme times. But all this is changed now. With the right technology and innovation, man has been trying to make the world a better place and save lives. The Air ambulance is the best product of it. That is what I call being human.
