Georgia Mesothelioma Lawyers Help Victims of Asbestos Exposure by Meredith Walker

Article published on January 14th 2012 | Law

Mesothelioma is an aggressive cancer that usually takes 25 to 40 years to develop, but quickly invades the body after it has done so. The Georgia firm of Wallace & Graham include mesothelioma lawyers who have helped clients throughout the country obtain the accurate diagnosis that is vital to verifying the illness and beginning the treatments that can slow its progression and alleviate pain. Some symptoms of mesothelioma are difficulty breathing, chest pain, irregular heartbeat, chronic fatigue, sudden weight loss, and nausea or vomiting.

Asbestos is the only proven cause of mesothelioma. Asbestos is a mineral that was widely used in industrial settings, construction materials, and consumer products. Persons who worked in power plants, chemical refineries, shipyards, and other industrial settings have suffered most from mesothelioma. Asbestos was prevalent for many decades, and millions of persons came into contact with the material, including electricians, auto mechanics, and military personnel. Additionally, there were thousands of different products that contained asbestos, which means many persons far removed from industrial jobs were put at risk.

Asbestos litigation is a major focus of the mesothelioma lawyers of Wallace & Graham. Speed is critical in a mesothelioma lawsuit. And it is crucial for a mesothelioma lawyer to guide a victim of this illness through the complex legal process. The first priority of Wallace & Graham, P.A. is getting clients the medical help they need. The firm also seeks to hold accountable the corporations or employers responsible for asbestos exposure. In many Georgia cases, our clients were exposed to asbestos because of the negligence of employers in chemical plants, oil refineries, and factories.

The mesothelioma lawyers at Wallace & Graham have brought asbestos lawsuits in jurisdictions throughout the country, and we are committed to helping clients get the compensation they deserve. The firm's lawyers sit down with the client and family members and discuss their life and work history. We use photo albums, family stories, former co-workers and our own databases to find out where the exposures occurred. This information is used to demonstrate the liability of a particular company or employer. Our mesothelioma lawyers analyze the diagnostic and treatment records to establish the link between asbestos exposure and the client's cancer, and they calculate the long-term costs of health care treatment.

The statute of limitations, grounds for filing claims, available damages and caps on non-economic damages are different from state-to-state. The firm works with local counsel to file the lawsuit in the right jurisdiction. And it vigorously pursues financial remuneration, which may include workers' compensation, product liability, premises liability, and Social Security, or Veterans Administration benefits.

Sadly, many of the victims of asbestos exposure die before realizing the outcome of a legal proceeding. However, family and friends of such victims should know that the mesothelioma lawyers at Wallace & Graham will continue the lawsuit as a wrongful death action on behalf of the estate. Our lawyers have experience throughout the Southeast. Whether it is a Mesothelioma Lawyer Georgia or a mesothelioma lawyer South Carolina, we are dedicated to seeing our clients get justice to the fullest extent possible, even in the unfortunate event of a client's passing away.
