Article published on March 23rd 2012 | Business

Deep freezer is a household and a commercial item that in a way helps to stock food items and prevents them against any damage and depletion. These freezers can be used for industrial as well as household purposes. In the present scenario, as there are several items that have more than one applications and are used according to their relevance. For instance, cheese knife. Cheese knife is similar to other knives we use, but its construction and usage varies if we compare the technicalities of this knife with the others ones. Similarly, deep freezer is of several types be it for household purposes or industrial use, so it is used according to its relevance.

Deep freezer is used in super markets and stores to store food items. These kinds of deep freezers are used by restaurants and bars as they store raw and the food which is prepared in them. Hospitals use deep freezers to preserve and store blood and these are even used in blood banks. These equipments come in several shapes and sizes. Nowadays, it is very important to choose a reasonable good deep freezer, as it is important to keep your food fresh and clean.

However, we have discussed about keeping the food items in a deep freezer, but how about the functioning of the deep freezers that are used for industrial purposes. Deep freezer that are used for household items are less expensive than the ones used for industrial purposes. Laboratory refrigerators are more or less same to the deep freezers that are used for industrial purposes. These have digital temperature indication, are extremely reliable, low in maintenance, and they are designed keeping in mind long storage of blood with a PUF insulation.

The temperature range of these equipments vary, they can be of -20, -40, -86, and -100 deg. The temperatures of these equipments are different and are set according to the requirement of the apparatus. Another factor for setting up of these equipments is power load. The less the temperature is the more electricity it will require. So you need to make sure that if you are setting up a deep freezer, you should indeed have a strong power load. The temperature inside the item is controlled through programmable micro-processor based temperature controller cum indicator. There is even an audio visual temperature alarm that is provided in the unit for protection during temperature fluctuations. These are generally double walled cooled units, where the outer body is made of thick aluminum sheets and the inner chamber is made of heavy gauge stainless steel.
