Article published on May 23rd 2012 | Business

Automated billing is a much needed service today. In any kind of business, whether itâ€™s a shop or a telephone service provider the automated billing can save long hours of calculation. There are softwares that can help you with billing and they are especially made to suit the different types of transactions with varied terminology. Then there are systems for online billing as well. The software is designed so that it has a customer web portal for online bills.

It also has open APIs that allows integration with provisioning platforms, external systems, third party systems and all in a few easy steps and it is a huge revolution in billing mechanism. It has a process driven architecture, which allows driving the entire operation with Business Process Management (BPM) methodology and reduces the cost as it is one of the most cost effective methods in the market today.

automated billing can be of various types. The various systems are made accordingly. A fully automated system will be connected to the computer and it will do all the identification and calculation by itself. Whereas, a semi automated system might record, while the final calculation might require manual typing. The costs of installing the various types of billing systems also differ a lot. The fully automated systems obviously costs more but then they are great when there is a huge crowd waiting in the line to get their things packed.

If you run a shop or are into similar kind of business then do opt for automated billing services. They are of great help as they will reduce a lot of manual labor on your part and you will be able to make better calculations regarding the payment in much less time.
