Cars in Canada: How the Sector Works Yesterday and Today by Stelle Courney

Article published on March 21st 2012 | Business

Canada has consistently been known for its exceptional quality in producing cars. This can be mapped back to the early 1900's when a party of young businessmen led by Gordon M. McGregor organized the Ford Motor Co. of Canada, Ltd. Since then, the horse-drawn coaches they utilized were substituted by noisier yet more effective automobile engines.

The Canadian motor vehicle industry was maintained by the successful production of light-duty automobiles such as cars, vans, and pickups. Additionally, the heavy-duty ones like trucks, transit and school buses, as well as army vehicles added a lot as well. They managed to accomplish all these and more mainly with the help of tough business ties with North American vehicle firms that provided them the products they required in producing excellent autos. With that, the financial divisions included in the thriving carriage and sleigh production were replaced by leaders of the car-producing automotive industry which included manufacturers, re-builders, manufacturers' agents, warehouse distributors, national distributors, buying groups, wholesalers, machine shops, retailers, collision repair shops and vehicle service and repair outlets.

Moreover, this strong auto industry in Canada managed to maintain itself through plans that bolstered its networks with Asian and North American dealers. Importation and exportation ventures were further nurtured and a bulk of international consumers began to acknowledge the quality and functionality of the automatic wheels they created. The Canadian auto industry is sailing steadily, constantly showing high amounts of car purchases.

Canada also experienced the unfavorable consequences of global economic challenges that resulted in decreased car purchases and closed trading deals. Fortunately, Ontarioâ€”the Canadian province known as the nation's center of vehicle manufacturingâ€”managed to recover the industry. For one, quality cars in Hamilton continued to be created and marketed locally and overseas.

With those cars for sale Hamilton manufacturers produced, the percentage of overall exports from Ontario alone got to 45 percent. The province went on to serve as a bastion of Canada's automotive industry as 400 additional car parts manufacturing outfits were formed, plus 16 auto assembly plants capable of both light wheels and heavy trucks manufacturing, yielding over 50,000 career options for Canada's manufacturing plants and more than 330,000 for the entire motor vehicle market.

The positive manufacturing ventures were complemented with outstanding dealer organizations, too. Thus, even the used cars in Hamilton and other regions of Canada progressively rose in the industry. To understand more regarding what is ahead for quality cars in Ontario and the rest of the nation, visit siteselection.com.
