Why is construction photography necessary?

There are many reasons why construction photography is necessary. One of the reasons is that is important to document the progress that has been achieved so far in a project, especially some of the larger ones, such as bridges, tunnels, sky scrapers etc, where there are huge amounts of money involved with various parties involved. The photos help to keep all interested parties up to date with good visuals that lay persons can understand. Quite often there are local authorities that need to know the progress, investors, designers, architects and the construction companies themselves. Having photos of the projects lets everyone know that good progress is being made and that everything is going according to plan.

Construction photography is good advertising for future projects.

The construction company and the architects benefit greatly from construction photography. It instils confidence in prospective clients who need to be reassured that the company they are considering using is capable of tackling similar sized projects. It not only shows what is possible in terms of building achievement but it also gives an idea of the work ethic of the company. Every company needs to be able to show off their wares and companies that undertake large building projects are no different.

Where can you find a company that specialises in construction photography?

Construction photography is a specialised art that is not within the remit of most photographers. Knowing which shots to take and how to take them is integral to the finished product. One company that does specialise in construction photography is called In-Press Photography Ltd. They are experts in the field of construction photography and have been called on to take photos of some huge projects such as the London Olympic venues and the building of Heathrow terminal 5. You can view a list of some of their other impressive clients and get a good idea of what they are about at www.in-press.co.uk. When it comes to construction photography they are leaders in their field who stand head and shoulders above the competition.
