Article published on February 6th 2012 | Business

We all know how challenging it could get â€“ buying presents for friends, loved ones, and business associates for those special occasions that come and go faster than most of us would have liked. The task gets even more difficult if we happen to know someone who seems to already have everything or maybe one with unusual or somewhat... eccentric tastes. In some cases, we ourselves wish to make the effort to give away unique gifts especially to those whom we regard with high esteem.If you are searching for the bestpersonalised yet unusual gifts, Australian print lab DNA Artâ„¢ offers a great idea for you: ready-to-hang DNA artwork.

DNA Artâ„¢makes truly unique artwork. Each piece is created using a personâ€™s DNA profile. We all know that no two persons â€“ not even twins â€“ in the world share identical genetic codesand the same can be said of each DNA portrait. A DNA art piece does not only make a fine decorative item, it also expresses your feelings of affection and appreciation to the persons to whom you are sending the gift.

Imagine your recipients expecting the usual over-the-counter presents and then finding out to their surprise that you have just given them one of the most wonderful and unique gifts possible! DNA artwork has a distinctive modern appearance that is not unlike abstract and modern art pieces. It may be displayed to complement the interiors of any home or office and is sure to grab the attention and awe of whoeverâ€™s looking.

DNA Artâ„¢employs a professional genetic lab in creating high-quality and unusual gifts. A fragment of the DNA strand is tagged with fluorescent dyes to define the unique series of bands and highlightsthat make up the strand. The image is photographed and sent to our digital experts for image enhancement. We have 57 different styles to choose from so that you or your recipient can choose the best way to express your individuality through DNA art.

We show our customers an online proof of the finalised image before we print the DNA artwork on museum-grade canvas using high-technology printing equipment. And just like a true piece of art, we guarantee that our DNA portraits last a long time. The quality of the print does not crack, peel, or fade easily. The resulting print may be delivered as a stretched canvas, printed on fine art/photo paper, or mounted on Acrylic Ice.

DNA Artâ„¢has customGift Boxes available for giving away our unique gifts of DNA artwork. Our DNA portraits may be customised to fit your preference or the personality of the person whom you are sending the gift to. By availing of the DNA Artâ„¢Gift Box, you grab the chance to introduce someone to one of the best unusual giftsthey will ever receive. Our Gift Box includes a DNA sample collection kit, which we will be sending to the address of the person/s you indicate on your order.
