Article published on June 8th 2012 | Business

What is the Dreambox 8000? A lot of people have wondered about this. Well, here is some in-depth information. The Dreambox is a series of Linux-powered DVB satellite, terrestrial and cable digital television receivers (set-top box), produced by German multimedia vendor Dream Multimedia. This is the system that everyone wants.

The Linux-based production of this software was originally used by Dreambox and was first developed for DBox2, by the Tuxbox project. As such, the Dbox2 was a proprietary design distributed by KirchMedia for their pay TV services. Then, the bankruptcy of KirchMedia flooded the market with unsold boxes available for Linux enthusiasts. As a result of that, the Dreambox shares of the DBox2, including the Ethernet port and the PowerPC processor dropped.

Its new firmware is officially user-upgradable, since it is a Linux-based computer, as opposed to third-party "patching" of alternate receivers. What this means to consumers is that all units support the company's conditional access (CA) system, with software-emulated CA Modules (CAMs) available for many alternate CA systems. But it also means that the built-in Ethernet interface will let networked computers access the recordings on the internal hard disks found on some of the Dreambox models.

In addition, it also lets the receiver store digital copies of DVB MPEG transport streams on either network file systems or it can broadcast the streams as IPTV to VideoLAN and XBMC Media Center clients.

This is not like many PC based PVR systems that use free-to-air type of DVB receiver cards, in which the built-in conditional access allows receiving and storing encrypted content.

For many wholesale outlets, the Dreambox 8000 and the Dreambox 800 HD are two of the most popular systems on the market today. When retailers carry these models or the DreamBox 500, DreamBox 600, they find that sell very well and sell at a price point that consumers are often more than willing than to meet. What this means to many retail outlets is more sales, sales that are made much easier, and higher consumer satisfaction levels. One of the better satellite finder online stores is Dreambox-8000.com which is an authorized dealer that supplies high-quality Dreambox equipment.

One of the major benefits in dealing with this company is there extensive inventory of Dreambox 8000 and other Dreambox models. Visitors to their site will find a complete listing of in-stock models as well as an extensive listing of auxiliary parts and components. This satellite finder online store is truly a one-stop shop for those who looking for Dreambox models, systems and parts. And their pricing is very competitive when compared to other online stores that carry similar products.

To find virtually any component associated with the very popular Dreambox systems, simply visit the site. The site is laid out in a neat, organized manner, making it very easy for visitors to find exactly what they are looking for. Online ordering is also easy and conducted via secure methods to protect customers as they make their purchases. Visit the site today to find all your Dreambox 8000 needs.
