Article published on November 25th 2011 | Business

Re-modeling a house is a big decision. It not only includes a lot of money, time and patience but also specialized expertise, as it is something that canâ€™t be done every second day. Flooring is an integral part of this re-modeling. The flooring of a room always compliments its interiors. It increases the style and elegance of the room and lends an aesthetic touch the entire ambience. While it is all so important and crucial, there is just no scope of a mistake. When you re-do the flooring of a house, you have to get it all right, and that too in the first go!

There are mainly two types of wood flooring NJ residents can choose from - Engineered and Solid. Solid hardwood floors can be sanded and refinished many times to bring them back to their original glory. Solid wood flooring NJ last for a lifetime! They also come pre-finished and unfinished in a variety of colors, styles and widths. Wood flooring NJ species include Oak, Maple, Cherry, Bamboo, Hickory, Ash & Brich.

Engineered hardwood, on the other hand, is becoming more appealing to many home owners looking at Wood flooring NJ options. Engineered hardwood flooring is real hardwood. The top layer is 100% real hardwood, while the layers underneath are compressed wood. Engineered wood is manufactured to withstand environmental variables like moisture and humidity which allows for its installation in basements & bathrooms. They can be sanded down and refinished once, depending on their thickness.

There are low-cost friendly wood flooring NJ options available in the market also. If budget is a constraint, then customers should go for laminate hardwood floors. In general, laminate is cheaper than engineered or solid wood. Installation is much quicker and inexpensive, and it is more scratch resistant than hardwood floors. However, the look of a laminate hardwood floor is somewhat inferior to solid hardwood floors.

When it comes to installation of wood flooring NJ, one must consider the flooring foundation. Whether there is a basement or a concrete slab will determine the type of installation, and the type of hardwood floors needed. For example, engineered hardwood floors works best over concrete slabs, where it can be glued. While on the other hand, hardwood floors can be installed by nailing down the solid wood plans over wood subfloors.

Out of the many Wood flooring NJ options now available in the market, customers can choose from any depending on their purchasing capabilities and design preferences. However, while making this decision, the customers need to carefully consider the type of wood, color, and area that needs to be covered. Customers should go to a companyâ€™s warehouse to look at the available stocks. However, with the multitudes of wood flooring types available these days, choosing the apt one, without the guidance of an expert can be a serious challenge.

Every house has a unique and different need. With multitudes of wood flooring NJ types to choose from, one should wisely give equal importance to both durability as well as style, so that the installation proves to be beneficial for the house, in the long run.

Wood Flooring NJ offer different types of hardwood flooring solutions to customers, depending on their requirement, purchasing capability and design preference.
