Article published on January 7th 2012 | Advertising

Travel is occupying an important role in everybodyâ€™s life. People are undertaking travels for many purposes. More than 60 percent of the people who are in travel to different destinations are found to be either business men or women or executives and employees working for some organizations. Without travels, production, marketing, promotion and development is absolutely not possible.

When it comes to travel, people select according to the affordability and convenience, different modes of transportations like two wheelers, cars, vans, ships, trains, buses and many more. While a two wheeler is quite sufficient to carry two persons; a car can carry around five passengers; a bus can carry around forty to fifty people and more people can be accommodated in trains. Driving a motor cycle or a car can be a pleasure; however, unless proper care is taken the machines are prone to get innumerable repairs apart from performing very poor. It can be well imagined about a two wheeler moving past in the crowded street with a loud noise and it can be easily understood that the exhaust performance of the vehicle is very poor. The same thing can also happen for cars.

What is the function of an exhaust pipe provided in a two wheeler, van, car, truck or bus?

It is an instrument having a lengthy pipe attached to the engine and it is responsible for sending out the unwanted gas from the engine. Normally the burnt out gas is bound to come out with a loud noise and the loud noise if freely let out can be a nuisance which attracts penalty apart from punishment and in order to arrest the noise fully, a muffler is provided at the end of the exhaust pipe. The muffler filters the sound; however, it releases the gas in a smooth manner so that very less noise is produced. Trucks in Australia are provided with quality exhaust pipes manufactured by reputed manufacturers.

Mufflers provided in the machines apart from reducing the sound in the machines are capable of sending out the unwanted gas emanated in the engine.

It is the responsibility of the owners and drivers of the vehicles to have a proper check every day morning before the vehicle is taken out for any trip to ponder over the braking systems; check availability of oil and fuel in the respective tanks; level of noise produced through the exhaust pipes and the condition of mufflers. The poor mufflers are responsible for the worst exhaust performance of the vehicles. Sensing the loud noise emanating from the engine through the exhaust pipe, the drivers of the vehicles should immediately replace the mufflers.

In fact, trucks in Australia perform well on account of the facts that they are taken care of by the owners and drivers in a better manner.
