SMTP or SMTP Relay Server Provides Immense Speed in Communication by Lee Rio

Article published on February 22nd 2012 | Email Marketing

It is a well known fact that the present generation wants everything very fast and with tremendous speed. This is the reason why they are extremely fond of internet because you can find anything or everything on the internet within a fraction of seconds. They are able to communicate with their friends and relatives just at a click of a button through email or chatting. The main source behind faster communication through emails is SMTP. It allows you to send and receive emails within few minutes. Therefore, it is essential to understand the SMTP Relay Server and thank it for making your life as it is today.

SMTP can be considered as a super fast express that helps in transporting all necessary information to the targeted destination within a minimum time period. Therefore, it can be called as a miniature power because it is the backbone of the complete global system of communication. It plays a very important role in sending and receiving of mails within seconds thereby helping in faster communication through internet. This is the reason why internet is now used for marketing purposes. There are several business organizations which believe that they will be able to reach out to large number of target audience by sending promotional emails to large numbers of people. SMTP Relay Server helps in sending of bulk emails to large numbers of people. It is considered to be an integral part of the email marketing system because it is the engine that sends bulk emails.

However, there may be times when SMTP stops functioning properly. The main reason behind its improper functioning is larger volumes of emails sent for advertising and marketing purposes. Due to increase in numbers of emails for promotional purposes, problems such as late or non-delivery of emails to their destination, non-delivery of mails to correct addresses and inadequate authentication of email occur. When such problems occur it becomes necessary to find solutions for them. This problem can be solved by making anti-spam filters and configure outgoing mails with the help of the following rules:

a)To get the static IP address from the internet service provider

b)Configuring forward and reverse DNS solution properly

c)Checking the black list

d)Configure SPF in order to show good intensions to the receivers

e)Configuring Domain Keys

Therefore, with the help of these rules the problem faced by SMTP Relay Server can be solved so that it helps in sending bulk emails smoothly.
