With electronic cigarettes you will be safe from the harmful effects of smoking by Sunny Sahot

Article published on January 23rd 2012 | Health

Smoking is injurious to health and may cause cancer but with electronic cigarettes or e-cigarettes, you will be safe from the harmful effects of smoking. Electronic cigarettes are an alternative to real cigarettes and looks like a real one. You can choose from the variety of models which works almost similar to real cigarettes. These cigarettes offer only pure nicotine and are free from other harmful chemicals. These cigarettes can be used anywhere in a public place as the smoke generated in them is free from chemicals and used to generate the effect of smoke. You can buy them at cheaper rates than the real one.

An electronic cigarette is operated with a battery and therefore it can be used for many times. The cartridge available in a market also lasts long and could deliver a smoking effect which could be equal to 30 real cigarettes. The smoke produced by these cigarettes is safe and can be inhaled without receiving the effects of second hand smoke. Hence, you can minimise your bills on cigarettes upto 75% and could save thousands of pounds per year.

A battery, an atomizer and a cartridge combined together forms an e-cigarette. These components perform different tasks to generate the same effects of smoking for a smoker. Their tasks are as follows:-

â€¢ Battery- A battery is supplied with an e-cigarette to produce charge. It is rechargeable and made up of lithium with an inbuilt sensor which starts working as soon as a smoker inhales.

â€¢ Atomizer- An atomizer contains a coil which usually heats up when a charge is received from a battery. It mainly vapourises an e-liquid contained in a cartridge.

â€¢ Cartridge- A cartridge is refillable and can be used again which contains a soaked wadding of an e-liquid. An e-liquid is used to produce the same smoking effect as if you are smoking real cigarette.

A single cartridge is sufficient enough to last upto 300 puffs which are almost equal to 30 cigarettes. Also, when you smoke a real cigarette, more than 4000 toxic chemicals enter your lungs. These chemicals can damage your lungs and may cause cancer. Therefore, choose electronic cigarettes in place of real cigarettes to stop playing with your life. You can even choose your kind of flavour to add more pleasure while smoking these cigarettes. You can buy variety of e-liquid flavours.

If you are also looking for an e-cigarette supplier, you are at right place. Take a pledge to quit smoking today, as it is very dangerous for your health and we assure that you will enjoy the same taste with electronic cigarettes but without any harmful effect.
