Roof Repair: Keeping the Rain Outside of Your House by Max Boughner

Article published on May 3rd 2012 | Home Improvement

Itâ€™s a rainy day on a weekend and you sit by the window. You watch as the trees sway to the soft blowing of the wind and leisurely trace the raindrops with your fingers behind the window glass. You feel a slight chill and wrap a blanket around yourself. As you appreciate the wonderful beauty of Mother Natureâ€™s rain, you felt a raindrop touch your face. Now, thereâ€™s only one question in your mind: â€œWhy is it raining inside my house?â€•

Maybe itâ€™s time to have your roof repaired. A roof can only last for so long without giving way to external elements. Continuous exposure to snow, rain, and sun will eventually weaken some areas and lead to further damage if not repaired promptly. So when do you know if itâ€™s time to call a roof repairman? Here are some common signs that your roof needs a makeover:

Water Spots on Ceiling

A roof works with your ceiling to keep your home dry and well-insulated. However, when you start seeing these irregularly shaped brown spots on the ceiling, it means that your roof has a leak. This problem requires immediate attention because water spots donâ€™t appear overnight. It takes time for moisture or water to seep through the roofing material, insulation, and plaster.

Buckling, Missing, and Curling Shingles

Buckled shingles are caused by the deckâ€™s movement and excessive moisture. Buckled shingles may break and cause leaks. Missing shingles can be caused by improper fastening and strong winds. Without shingles, your roof canâ€™t do its duty of providing cover for your home. You can ask a Concord roofing contractor to inspect your roofâ€™s shingle problem so that he can diagnose a remedy for your roofâ€™s condition.

Damaged Roof Flashing

Some roof repairs Concord homes need are on their roof flashing. Roof flashing is commonly used around vents and chimneys. It directs water to the ground and prevents it from passing through vents or chimneys. Rusty and worn-out roof flashing may lead water directly inside your house. Flashing issues can easily be fixed by a professional roofer.

Algae and Moss Growth

Seeing a dark greenish growth of algae and moss on your roof may not be an emergency, but these growths can wreak havoc on your roof. Algae and moss donâ€™t only make your roof look dirty, they can also remove roofing granules needed to deflect ultraviolet (UV) rays and keep your home cool. There are a lot of experienced roofers Concord residents may call for algae and moss removal treatments.
