What Can Make You Change Your Mind when Choosing Roof Color by Shania Fargo

Article published on February 8th 2012 | Home Improvement

Painting your roof is a challenging and exciting process. It is exciting since most homeowners usually cannot wait to see how it is going to affect the overall appearance of their homes. However, considering that your roof is one of the biggest structural elements in your home and that various factors may influence the color and type of paint to use, roof painting can be exceptionally daunting. This article attempts to identify the most important factors to consider before choosing a roof color that will best benefit you and your home.

Pitch

Heap and gable type roofs have pitch to provide good drainage and an additional interior space for the attic. The faces of these types are more visible from the ground than flatter top types. Mansard roof, for example, may have a set of steeper faces at the lower pitch layer but those are often installed with windows, which eventually take up most available spaces. Therefore, carefully choosing the paint color for pitched roof is needed to make the house attractive even from afar.

Trim

Most roofs have wooden trims or precast fascia right below the eaves. These trims serve as either covering for the gutter or as lock to the eaves to prevent uplift. Roofing contractors in productive states like Michigan choose a roof color depending on the color of the trims. Undoubtedly, if the roof color does not complement with the trim color, even if both colors are ostentatious, the final result wonâ€™t be appealing. It is best that they complement to make the upper portion of your home pleasing to the eyes.

Location

The geographical location of your home is not necessarily what can influence your choice of roof color but the environment. If your home is surrounded by huge trees and good shade, whether you like to match or to clash the appearance of your home to its surrounding, roofing contractors Michigan homeowners trust recommend light or dark colors of close shade.

Roofing material

Roof paint is only used for limited types of roofing materials. In fact, ceramic-based roofing materials such as tiles and shingles can easily deteriorate when applied with paint. Most of these kinds of roofing materials have pre-fabricated colors. Roofing contractors Michigan has to offer use paint best on metal roofing. Regarding color, some metals like aluminum require dark paint to cover its shiny surface.

Energy conservation

Paint color has long been known to affect the heat absorption of a surface. Bright colors reflect more light into the atmosphere therefore reducing the heat absorption of any roofing MI houses have. That way, energy can be conserved by minimizing the use of the HVAC system.
