How to earn money: Make a free website and use facebook for business by Edmund Brunetti

Article published on December 23rd 2011 | Internet

Internet provides a massive platform where you can conduct business and earn a lot of money. It is thanks to the incalculable future potential of online business that a number of people these days are taking a plunge into the web world. Some people are even taking their local territorial business into the online world so as to expand their market to a national or even an international level. Besides, with economic depression and corporate recession plaguing the western countries in recent times, people have shown a keenness to make a free website and earn quick bucks on net.

Unlike a territorial business which needs financing for premises, you do not need to invest anything for doing an e-business. All you need is to make a free website and you can thereafter start selling. Besides, various free websites also permit you to market your business, products and services to a very wide community of surfers.

Benefits of free websites: Free websites proffer numerous benefits to businessmen and service providers. A few of them have been enumerated below:

a. Economic: As stated earlier, you do not need to splurge your finances in order to make a free website. It is extremely economic to set up a personal site where you can put your products (or services) on display along with all necessary information. Then you can sit back at home and count your money which will keep trickling in as long as you keep pace with the marketing trends.

b. Ideal market place: Your business site shall serve as an ideal market place where seller, the e-shoppers and potential clients can congregate to exchange information and products. E-commerce is facilitated which is advantageous for the buyer because of a number of reasons like convenience, saving of time, etc.

c. Web development: Your website can be designed and developed in a manner that it is search engine friendly. Right applications and tools make it easy for the Google spider to crawl into your page, index it in search results and thus your site gets optimized.

Benefits of Facebook for business: There are 2 aspects of online business. One is to commence it by setting up an official webpage and the other is to market the enterprise so as to scale new heights, generate more traffic and eventually increase the sales figures. Facebook, a massively popular social networking site, is extremely beneficial in this regard. Being a haven for millions of internet users from all parts of the globe, this social platform can be used discreetly for a very powerful marketing campaign.

Facebook for business implies creating a fb profile or page under the name of the business and gradually gathering fans. By posting interesting statuses, slogans, captions and video (video marketing), corporate houses & sole proprietors can popularize their products. Text links to the official website automatically directs traffic from Facebook to the business page where the products are made available for purchase. While the short-run goal of â€˜Facebook for businessâ€™ is to maximize your revenue, the long-term objective is to build a halo of powerful global brand around your organization.
