Article published on June 15th 2012 | Internet

Music is soothing to the ears and it gives spark to your soul. It has a healing power and relieves you from daily stresses and depression. There wouldnâ€™t a single person who doesnâ€™t like music. Wheth a person understands the meaning and lyrics of the song or not, but he will surely enjoy listening to a beautiful music. Even in this technology savvy world, the craving for music has never diminished. It could be the possible reason why the radio survived even at the times when the television and Internet were predominant.

The radio has been in use since times immemorial. It is no wonder that the radio is sought after by people from the time it was invented by Guglielmo Marconi in 1895 till now. The traditional radio worked by means of transmitting audio signals in the form of electromagnetic waves. These waves had frequencies that range from 3 kHz to 300 GHz which is far less than the frequency of visible light and they were called as radio waves.

With advancements in technology, people want more sophisticated forms of listening to music. And the Internet radio is the right technology that meets all the expectations and requirements of the music lovers. The Internet radio is known by different names like net radio, online radio, streaming radio and simply e-radio. It is referred by the term webcasting rather than broadcasting as the signals are not carried through radio waves. In the Internet radio, the audio signals are transmitted via the Internet.

Here the signals are transmitted as a steady stream of audio signals that cannot be interrupted. We cannot pause or replay the audio as it is webcasted in real time. So the Internet radio is different from podcasting where you download the music files. What happens in Internet radio is live streaming where the user can listen to non-stop music. Some Internet radio stations are linked to a traditional radio station while there are others which function independently.

With the arrival of Internet radio, the radio system is reforming itself and defining a new way of reaching out to the masses. The Internet radio doesnâ€™t have the shortcomings of the traditional radio like geographical constraints, poor signal strength and coverage. The Internet radio can be accessed from anywhere in the world and it gives the listeners the privilege to access the music stations in different countries. For instance a person living in America can listen to a radio station in Middle East or Australia if he wishes to.

There are more than 10000 Internet radio stations presently and one of the best advantages of listening to music on the Internet is that they come free of cost. Some Internet radios are commercial free and so there is no interruption to your music listening. Thinking that you can only listen to music on Internet radio? Then you would be surprised as in Internet radio, you get other valuable services like sports, news, gossips and plentiful genres of music.

If you have a computer with the Fastest Internet connection and a sound card, you can readily tune into the Internet radio of your choice and start enjoying endless music. Eager to know how Internet radio works? You will find a list of various media player choices like Winamp, Windows media player, Real player, and iTunes. You have to download the file of your choice and open it in a media player. Now you will be connected to the server and you can start streaming your favorite music.

Nowadays all the applications are available on the Internet. The Internet radio offers all the services which a traditional radio provides and it comes with more convenience and easy accessibility. Music lovers- you now know where to find your favorite music!
