Vipeak series mobile crushing station market began to stabilize by Sally

Article published on December 6th 2011 | Advertising

Vico series mobile crushing station equipment (jaw crusher mobile crusher, Cone Crusher Mobile Crusher, Impact Crusher Mobile Crusher) is applied to cement broken limestone mining, crushing can reduce transportation costs, improve the comprehensive utilization of mining resources, help to protect the mine environment; used in construction waste sorting crushing, screening into coarse and fine aggregate, preparation of substitute natural aggregate concrete, brick building and road base material, can increase the recycling rate, further reducing the environmental pollution caused by solid waste, recycling materials to achieve use.

With the development of mobile crushing plant as a new type of construction waste disposal facilities are increasingly favored. Mobile crushing plant equipment, mainly to solve the crushing operation in space restrictions, the construction waste disposal. After Vico combination of heavy equipment, mobile crushing station construction waste after sorting through the specific equipment to remove iron material which contains iron, by rough broken, broken, crushed or crushing equipment, handling, processing into a certain size of recycled sand and gravel aggregate, and finally applied to the roadbed stone, unburned brick, cement, admixtures and other aspects. Reasonable construction waste through recycling, construction waste to reduce emissions, environmental pollution is also reduced accordingly; the same time, the use of construction waste recycling system, building materials, environmental science, reduce production costs, the economic development of environmental protection is also very have a positive effect.

Vico Heavy enterprise development to date, has maintained a strong sense of competition, constantly developing new technology in the case, has maintained its production equipment and spare parts suppliers with foreign competitors and power struggle, according to the strength. With the corporate brand development, in recent years to focus shifted to the underlying technology and infrastructure components up to improve its own brand of R & D and manufacturing standards.

Vico heavy industries manufacturing crusher, sand making machine, mobile crushing plant and other equipment market very versatile, can be used in chemical, mining, construction, water conservancy, metallurgy, coal, glass and other industries. In China's most important application area is the cement industry, paving and mining, applications in these industries of the breakers of the industry as a whole accounts for about 30%. Vico Heavy Wheeled mobile crushing plant design is like a customer, to eliminate the broken space, the environment, the basic configuration to customers busy crushing the barriers as the primary solution. To provide our customers with simple, efficient, low-cost hardware, operating facilities project. Vico series mobile crushing station market began to stabilize, Vico Heavy Industries is committed to being your partner satisfaction, and never stop.
