Aluminium Lean-To Conservatories Provide Great Thermal and Energy Efficiency by Cheryl Stevenson

Article published on December 23rd 2011 | Gardening

Aluminium lean-to conservatories provide superb thermal and energy efficiency â€“ none more so than lean-to conservatories designed by Apropos.

Aproposâ€™ lean-to conservatories conform to the highest standards and regulations for thermal and energy efficiency; meaning that, in the colder months, their lean-to conservatories can be enjoyed as much as they would be in the summer months.

First the statistics...

Aproposâ€™ lean-to conservatories offer one of the best thermal efficiency ratings on the market - with a structural U-value of 1.6 W/mÂ²K and a centre pane U-value of 1.1 W/mÂ²K.

What does this mean?...

It means that Aproposâ€™ bespoke lean-to conservatories are super efficient at retaining heat during cold weather. Conservatories of old were chilly places in the winter months, and, more often than not, shut off from the rest of the property by external-style patio doors. Not so Aproposâ€™ modern lean-to conservatories, which act as hubs for family life all-year around.

The lean-to conservatories designed and manufactured by Apropos provide a welcoming space for all the family to enjoy, whatever the weather outside. Indeed, lean-to conservatories need not be partitioned off with bulky doors. Beautiful archways can be created to allow access into the lean-to conservatories at all times â€“ with householders safe in the knowledge that warm, inviting environments will be awaiting them in their lean-to conservatories.

At this time of year, with cold weather fast approaching, it is reassuring to know that lean-to conservatories will withstand the harsh winter months.

Of course, lean-to conservatories can be used as sun rooms or even as greenhouses in the summer months, with amazing folding sliding doors allowing wonderful freedom to maximise the garden; but lean-to conservatories can also be used as dining rooms, living rooms, and kitchen extensions throughout the year.

Indeed, in a few weeks time many families will either be preparing or tucking into their Christmas dinners in their own lean-to conservatories; enjoying the magnificent settings that lean-to conservatories provide for such occasions. Indeed, should it be a white Christmas then the picture will be complete. Proof indeed that lean-to conservatories are super family places to be enjoyed whatever the weather.
