Electronic cigarettes are the smart way to smoke in the public place by Sunny Sahot

Article published on January 18th 2012 | Health

Electronic cigarettes are the smart way to smoke in the public place without any interruption and without affecting your lungs. Electronic cigarettes are the replacement to the ones usually available in the market. These cigarettes are free of hazards and offer pure nicotine which is like using nicotine gum to quit smoking. The smoke produced by this cigarette is equivalent to the smoke produced by the one available in the market and gives the same pleasure of smoking without actually smoking the real cigarette. These cigarettes are operated with a battery which can be recharged again and again.

Electronic cigarettes and its components

An electronic cigarette

is usually made up of three parts and resembles like an original cigarette. Letâ€™s know about its components.

â€¢ Battery- The battery is rechargeable and is made up of lithium, an inbuilt sensor is connected with it also. Therefore, a battery starts working as soon as a smoker inhales it.

â€¢ Atomizer- There is a coil inside an atomizer which heats up after getting charged from a battery and vapourises an e-liquid to produce smoke while smoking.

â€¢ Cartridge- A cartridge is a mouthpiece which contains a soaked puffs of e-liquid. The cartridge is refillable so that a smoker can use it again and again.

Why to use electronic cigarettes

?

When a person smokes from a usual cigarette, more than 4000 harmful chemicals enters his lungs including carbon mono oxide, tar, arsenic, cyanide and many others. But, if a person smokes an e-cigarette, he will be free from these chemicals as it doesnâ€™t contain these harmful chemicals but only pure nicotine. Therefore, it can be used in public places without restrictions. It will prove to be a very good product for chain smokers who are willing to quit smoking.

A cartridge of an e-cigarette contains an e-liquid which is equivalent to 15-20 cigarettes. Therefore, it is very cheap product and can save your thousands of pounds per year. Although experts are still researching whether there is any side effect of using it or not but itâ€™s for sure that these cigarettes are far better and safer than usual cigarettes. These cigarettes can be used in malls, multiplexes, airport and any other public place. But do remember to keep these cigarettes away from the reach of children.
