How Sun Labs Self Tanning Lotions Provide a Better Bronze Than UV Rays by Emma J. Joy

Article published on June 27th 2012 | Health

While a self tanning lotion may not actually provide a better looking bronze than something you can achieve through going to a tanning bed or using the actual sun, self tanning lotions are much safer. Myself, and all of the other people who agree with me and use self tanning lotions on a day-to-day basis, think that this makes self tanning products much more worthy than having a tanning membership or laying out in the sun to achieve a tan. Tanning beds and UV rays from the sun can harm your skin and cause a lot of damage to your body over time. People who have light complexions are more prone to developing skin problems, especially when they are exposed to an excessive amount of UV radiation rays. In order to combat this problem but still get that attractive tan that you are looking for, you can use self tanning lotions. Sun Laboratories dark sunsation self tanning lotion 32oz is a product that Sun Labs has been providing to their customers for many years. By using something like this instead of tanning with UV rays, you can get a good bronze for your skin that is attractive and healthy.

Sun Laboratories chatsworth is another product on their website that has become particularly popular. Sun Labs specializes in providing tanning salons and individuals with high quality self tan solutions. On the website, you can find self-starter kits that provide a fake tan for you that will last anywhere from a few weeks to a few months depending on how often you apply it. You can also find large quantities of self tanning solution that are provided to businesses like tanning salons that deal with spray tans and tanning lotions that they sell in large quantities. A lot of tanning salons are starting to offer spray tan solutions in their salon. This is done because there are numerous people who do not want to expose their skin to harmful UV rays and would much rather apply a self tan. In order for tanning salons to capitalize on this market, they introduced spray tan machines that can provide this for their customers.

Self tanning is a great opportunity to get the tan that you are looking for without having to suffer from the negative attributes of physically tanning. Self tanning is also much more convenient than regular types of tanning. I say this because self tanning can be done at home through the comfort of your own environment. You can apply the self tanning lotion or spray yourself, however, it is recommended that you go to a tanning salon and use a spray tan machine, because it will apply the product evenly on your body. When you apply this self tanning solution yourself through a lotion or spray tan, humans are prone to make mistakes and accidentally apply more solution in certain areas of the body. This could give you an uneven tan and make your complexion look unusual. In order to make sure that you have the tan applied evenly, spray tan machines are highly recommended.
