Article published on January 19th 2012 | Health

Top rated wrinkle creams do not pass the test comprehensively when it comes to delivering results. Women and men affected by ageing skin problems prefer using topical anti ageing skin care products rather than spending exorbitantly on invasive treatment forms such as plastic surgery or Botox injections. Besides, they are painful and can be highly inconvenient as the treatment process takes many sessions to complete.

Women find it easy to use products such as Hydroxatone AM/PM, primarily because they deliver results by diminishing the appearance of fine lines and wrinkles. The scientific advanced formulation even helps reduce the appearance of deep wrinkles in the forehead area. Hydroxatone also helps increase skin hydration by over 20 percent, which is believed to be one of the reasons why wrinkles and lines are erased through regular use.

â€¢ A Cream that Incorporates the Expertise of The Best Industry Professionals

The product has been co-developed by experts including a well known plastic surgeon and researchers from the field of dermatology and cosmetic science. This formulation is effective in making the fine lines smooth and improving the skin texture. Top rated wrinkle creams do not match the effectiveness of Hydroxatone as can be seen from the results of independent clinical trials.

Women who participated in the clinical study were unanimous in their views that Hydroxatone AM/PM improves skin moisturization and the overall appearance of the skin. Of those surveyed, 97 percent women felt that the product made a perceptible improvement in their skin texture and smoothness. 97 percent women also believed that it would benefit their friends the same way it has helped them and wanted to recommend it to them.

â€¢ Hydroxatone Has Everything You Need in An Effective Anti Wrinkle Cream

91 percent of the women surveyed said Hydroxatone added a healthy glow to their skin and made it appear brighter. An impressive 88 percent of women said they felt and looked younger during this period of survey. Women were complimented about their skin after they took the Hydroxatone survey according to 84 percent of the participants. This clearly shows that Hydroxatone delivers on its promises unlike other top rated wrinkle creams.

Hydroxatone contains clinically proven ingredients chosen after years of research, trials and experimentation. These ingredients have it in them to impact the condition of the ageing skin. The ingredients moisturize the skin, reduce the depth of surface wrinkles and keep the skin hydrated. Hydroxatone also contains SPF factor to protect the skin from the harmful and harsh rays of the sun.
