Article published on April 23rd 2012 | Health

Lasik Surgery is commonly referred to as laser eye surgery which is a typical refractive surgery for correcting myopia, hyperopia and astigmatism. Lasik surgery Los Angeles has many renowned ophthalmologists who use laser technology to treat their patients. Lasik surgery Los Angeles reshapes corneas to sharpen vision and enhances the visibility of the eye.

Lasik surgery Los Angeles has many surgical corrective procedures such as photorefractive keractomy, also abbreviated as PRK. Though lasik surgery Los Angeles provides many benefits such as faster patient recovery and other medical facilities like post-operative treatment if the requirement arises. Lasik surgery Los Angeles represents advances over radial kerectomy in the surgical treatment of vision problems, and thus has viable alternatives to wearing corrective eyeglasses or contact lenses for many patients.

California is the home to over one hundred lasik surgery Orange County physicians and cases which have a respectable count in its own. Lasik surgery Orange County has skilful and experienced eye surgeon where the success rate is high enough to satisfy the efficacy of the patients. The lasik surgery Los Angeles is the technique first made possible by the Colombia based Spanish ophthalmologist who around 1950 in his clinic in BogotÃ¡, Colombia, developed the first microkeratome and developed the technique used to cut thin flaps in the cornea and alter the shape in a procedure which later known as keratomileusis. Later technique and procedural developments included radial keratomy developed in the USSR in the1970s. The general term for changing a patientâ€™s optical measurements by means of an operation is the refractive surgery. The introduction of lasers in the refractive surgeries stemmed from work.

Lasik surgery Los Angeles has some major steps as follows:-

(a) Preoperative: - Patients wearing soft contact lenses are usually instructed to stop wearing 5 to 21 days before surgery. One industry body recommends that patients wearing hard contact lenses should stop wearing them for a minimum of six weeks plus another six weeks for every three years the hard contacts have worn.

(b) Operation: - Lasik surgery Los Angeles could be done with patients awake and mobile, however the patients are sometimes given a mild sedatives and anaesthetic eye drops. Lasik surgery Los Angeles is performed in three steps: - (i) the first step is to create a flap of the corneal tissue. (ii) the second step is remodelling of the cornea underneath the flap with the laser. (iii) finally, the flap is repositioned.

(c) Flap creation: - The corneal suction is applied to the eye for the proper holding of the eye.

Lasik surgery Los Angeles has got the best flap creation remodelling with the laser technique remodelling process. Also lasik surgery Orange County has the best lasik physicians in its continent.
