Article published on July 19th 2012 | Technology

A good news for many of us as we can expect BlackBerry Playbook 4G with LTE and HSPA network support soon enough if the news we are getting from our sources is true. The BlackBerry PlayBook tablet is previously being extensively acknowledged for its advanced performance, endeavor willingness, enhanced web experience & support for web values & open development tools. RIM earlier stated that they were working on the BlackBerry PlayBookâ€™s assistance for added 4G networks support that will facilitate enhanced business prospects for numerous carriers with developers & unmatched mobile experience for its users and with the added capability of Bluetooth, Mobile hotspot and BlackBerry Bridge, RIM is all set to put some added pressure on their competitors.

RIMâ€™s forthcoming BlackBerry 4G PlayBook tablets are set to bring professional status, with consumer pleasant understanding that is bound to recreate the potential of mobile computing development. These pioneering BlackBerry tablets will provide users with an particularly convenient design aspect with industries foremost performance with real-time multitasking & proportioned multiprocessing, uncompromised reliability web browsing including support for AdobeÂ® Flash with eye-catching HD multimedia, as well as superior security functions and endeavor support.

The arrangement of quality hardware features & design motorized by the new & highly applauded BlackBerry Tablet Operating System & open development gear, all along with support for 4G network that will grant a high performance and speedy platform that assist a mobile services uprising.

RIM announced different plans to offer 4 BlackBerry PlayBook tablets:

BlackBerry PlayBook with Wi-Fi

BlackBerry 4G PlayBook with Wi-Fi + WiMax

BlackBerry 4G PlayBook with Wi-Fi + LTE

BlackBerry 4G PlayBook with Wi-Fi + HSPA+

Apart from connectivity from Wi-Fi & 4G network as mentioned above, each tablet will also be capable of:

1. Bluetooth

2. Mobile hotspots

3. BlackBerry Bridge

I really sick of these law suits phenomenon these days, it seems like a trend that has become progressively more clear that just about anybody can be knock with patent claims. Recently Nokia slammed 3 Law suits against RIM and Nokia got into it but a very old clash with Mformation Technologies next to RIM now has a judgment which didnâ€™t turn out in favor of RIM.It was in year 2008 when Mformation Technologies filed a law suit in opposition to RIM asserting that RIM had dishonored remote device executive patents which were held by Mformation Technologies on BlackBerry devices and just after 4 days of consideration, the panel of judges established that RIM

was guilty and infringe those patents and now is accountable for $147.2M disbursement to Mformation Technologies ($8 per unit cost x 18.4Million BlackBerry devices). Mformation wins $147.2 Million as compensation from RIM is definitly hurt them but RIM is not worrying but on the positive note the payout only include BlackBerry devices existing at the time of law suit filing, not potential or distant damages which might have potentially account for $680Million (78 million x $8 per unit).
