Texting Gloves- a Answer to to Winter by Jonathan Wasserman

Article published on January 25th 2012 | Technology

Texting is a full time obsession. It seems no matter where people are from their homes, work to the shopping mall, they are texting and IMing on an unparalleled scale. Climate might have been the last hurdle to fall to the wave of texting enthusiasts with the advent of texting gloves for touchscreen devices like iPhones or iPads and Blackberries.

Texting and BB messaging has become one of the primary shout out tools for this generation. It is cheap and effective and gives the immediacy of response they seek. It speaks to the tremendous acceptance of socializing via electronic means. These exchanges seem to allow for an even more open discussion without the filtering often associated with visual contact. A freer dialogue ensues that is really attractive to most.

The limits of where and why to text are often as simple as opportunity. With the advent of speech-to-text tools the car is no longer off limits. Outdoor texting once thought to be beyond reach due to the touchscreen limits with traditional gloves is now forever changed with the advent and viral popularity of texting gloves for touchscreen devices.

Walking your dog no longer has to mean that you are cut off from your email. With texting gloves you can actually answer calls, text, email and really interact with your touchscreen device like never before. There are a number of different approaches taken to make gloves work for touchscreens;

Texting gloves with removable tips- as you can imagine this attempts to keep your hands warm while exposing your finger tips to allow them to interact with the device. A bit cumbersome and weather restricted as an option but one of the first generations in this space

Texting gloves â€œpatched onâ€•- Some glove manufacturers have elected to use their most popular style and add on a patch of conductive materials to further enhance their gloves popularity. The concept is genius while for many the execution has fallen short due to improper placement, fit / comfort issues. It has been determined through testing that the placement, material and design of the glove are all required elements for a good texting glove

Texting Gloves â€œBy Designâ€•- Texting gloves that are designed from the ground up have the benefit of the important comfort fit, accurate conduction, proper placement or integration of conductive materials.

The wave of new entrants into the market is rapidly growing and with it various seasons of gloves are supported from the mild to worst weather. After all, no one wants to be limited from using their touchscreen devices just because of a little bad weather. With so much interest, it is no surprise that there are touchscreen gloves for every budget and style. We have already seen the introduction of fashion texting gloves, ski texting gloves, golf touchscreen gloves and even some making their gloves available in multiple colors and sizes. Naturally, this is just the beginning of the variety we can expect in the coming seasons.

itGlove with Cold Touch Technology is unparalleled in its design, comfort and accuracy due to the method with which the gloves are designed, stitched and patched with conductive materials. The results are the best gloves for texting and emailing on the market today. Available in multiple colors, it gives everyone a choice that suits them.
