Article published on March 21st 2012 | Television

Some people may refer to TV as the idiot box. However, the television can keep you engaged for long hours if you do not have anything constructive to do. Things have got better once private players have entered in the world of cable television. The range of channels offered by them is simply fantastic. Sky T.V has gone a step further as they have introduced a free Sky broadband package. Mind you this offer is just not restricted to existing customers of Sky T.V. Even if you are new entrant, you can go ahead and avail this offer.

You will get unlimited broadband free for six months. However, if you want to avail this offer you will have to install a satellite dish in your home. It is a dish shaped parabolic antenna, which is designed to receive microwaves from communication satellites. They transmit data transmission or broadcasts such as satellite television. The modus of operandi is simple. The parabolic shape of the dish allows it to reflect the signal up to the dishes focal point. This focal point is referred to as feed horn. The feed horn transfers the signal to the low noise block down converter or LNB. This LNB plays an important role in ensuring that you can view television.

The dish with the passage of time has undergone a sea change. If you search, you will find a wide variety of dishes. You can have the motor driven dishes that are mounted on a pole and are driven by a stepper motor or a servo. You can also opt for multi satellite dishes which have various designs. The DTH, which means direct to home dishes have also made their foray into the market. Hence, if you are on the lookout to buy dishes there are plenty to choose from.
