Article published on December 17th 2011 | VOIP

Regardless of the size of the company, high speed and quality business communications are now considered as the success mantra in todayâ€™s business domain. And in order to give your business a competitive advantage you must think of employing the best telecommunications solutions. So if you are running a business which is small or growing, leverage the experience and expertise of a global leader that is renowned for offering telecommunications consulting and solutions, products and services.

There are several service providers that offer wide selection of telecommunications solutions and equipments to meet the requirements of the small, medium and corporate companies. Some of the most widely used products from these companies are ScopServ , Quintum , Skype Connect, Draytek, uVoice, Epygi, SNOM, etc. According to the need of your company you can consider any of these products for a better and more effective business communication.

Linksys by Cisco is a very popular small business VoIP gateway. Using VoIP gateway and analogue terminal adapters, one can easily make VoIP calls with analogue phones and lines. When it comes to telecommunications solutions, most of these companies offer a full range of solutions as per the Telecommunications needs of the businesses. PABX Systems, IP Telephony Systems, VoIP Least Cost Routing, Call Centre Solutions, Call Recording/Voice Loggers, Teleworker/Remote extension solutions, Telephone Management Systems, etc. are just some of the notable solutions.

Apart from these, these companies also offer Solutions for Retail, Solutions for Financial Services industry, and Solutions for Hospitality industry as well. They also offer tailor made solutions to meet specific business environment. You may consider IP Telephony solutions in order to link your head office and regional offices to your retail stores. It has now become a must for the financial services companies to record calls. If you are using a third party call recording product to your existing PABX you may replace it with the latest and high-end IP Telephony system. By employing it you not only avail all the facilities of your existing PABX but also many others new and useful features.

An IP Telephony solution from a renowned service provider comes with various built-in features like do not disturb, message waiting, wake-up call, wake-up call no-answer report, room monitor, toll restriction, and room status: room available, occupied, ready for cleaning, etc.

Technology has come a long way ahead and with the 19th century business communication you can never compete and sustain in the realm of 21st century business realm. To get an edge over contenders, businesses have to employ cutting edge technology. The most interesting fact is that the telecommunications solutions and products from these companies enable businesses to reduce the cost and improve their functionality and efficiency. This ultimately supports customers to increase market share and grow their business better.
