Texture Coating adds a 3D effect to the Walls Around by Avena Sowell

Article published on June 29th 2012 | Art

Paint adds a new dimension and a new life to the walls of a place. It can work wonders on most boring of all walls. It can also be used to prevent many walls from getting damaged. It can give a presentable look to the walls and thus add to the gorgeousness. Many people select the furniture in the house depending on the paint on the walls.

Like heat reflective coating is used on those walls exposed to the sun so that the ultraviolet rays from the walls do not hamper the color on the walls. It maintains the luster and the texture of the walls and makes it look new for a longer span of time. Many people prefer oil paint in their childrenâ€™s rooms and places like kitchen and all as they have the tendency to get dirty often and thus these paints helps the walls to be cleaned when they get dirty. Many people prefer texture coating on their walls as they adds 3D or 2d effect to the walls and makes it look exquisite. In many walls waterproofing is preferred as the water seeps in through the walls thereby hampering the walls and to avoid this, this kind of paint is used.

Render is a process by which an image can be textured, shaded and can be presented in a completely different way, very different to the original picture. Renderbasically focuses on creating generic quality of pictures and emphasizes on right amount of light, the visual features of the object and so forth.

By the use of texture coating the reflection is reduced and thus it makes the effect on the walls more prominent. In many offices this type of coating is most preferred as it adds creativity to the walls. The texture painting can be of ragged pattern or in the shape of a spatula or in most of the times it can be an abstract art. Various types of paint brushes are used to make the various patterns on the.

Waterproofing is preferred by many clients as it prevents the water to see in through the wallsand the walls are thus protected from the rain during the rainy seasons and the wet weathers. It is mostly used on the roofs and the exterior walls of the house so that the walls are prevented from damage and they do not swell up as a result. Many chemicals are added in the paint to get this typical paint and many a times Poly Vinyl Chloride is used.

There are various companies offering paints of different material, quality and texture and the price of each varies accordingly from company to company. They even give a demonstration of how the effect of paints on various walls would look like and how each wall would look like after the paint is applied. There are even many online web sites that allow the clients to sit in front of their computer and view the color combination and select the choice at their will.
