CNG – the Popular Vehicle Fuel of the Modern Generation [By Randy James](#)

Article published on June 29th 2012 | [Auto](#)

For several years, Compressed Natural Gas or CNG has been employed by people as a popular household fuel. However, in the recent years it is increasingly used as an alternative fuel for different vehicles. Today, more and more vehicle owners are switching over from gasoline to this natural fuel. The following paragraphs will assist you to comprehend the reason behind the surge in its popularity:

Compressed Natural Gas is comparatively cleaner and more eco-friendly than the other organic vehicle fuels. This is the first and the foremost reason for it been a good alternative fuel option. It is estimated that in the CNG cylinders 20% less carbon dioxide, 70% less carbon monoxide, 87% less nitrogen oxide and 87% less non-methane organic gas is generated as compared with that of the petroleum-based fuels. The methane produce of the CNG is nullified by the significant reduction in the carbon dioxide emission.

The availability of this natural gas at a much cheaper rate than the other petroleum-based fuels have made this gas quite venerable among the people. This natural gas can be obtained for as low 0.85 cents a GGE to \$3.75 per gallon.

Another reason for the soaring popularity of this fuel is its safety aspects. The safety of this fuel can be divided in two factors. The first factor is the CNG fuel systems that are built in line with the approved quality standards. The CNG cylinders are an essential component of the CNG fuel systems. Here the Compressed Natural Gas is being preserved unless and until it is been harnessed by the vehicle engine. The second safety aspect of this natural gas is its physical properties.

When it comes to saving money and also the environment, CNG is regarded as the most viable fuel solution for the vehicle owners. With this natural gas we can definitely hope to have a greener tomorrow!
