Benefits of Transferring your Embroidery Designs through Embroidery Digitizing?

by John Peter

Article published on December 16th 2011 | Others

Most people are not satisfied with their embroidery designs. But at the same time they donâ€™t have the knowledge that their designs can be

computerized and created using a sewing machine with immaculate detail. Digitizing Embroidery is the process of converting an image or a bunch of

words into a form that can be understood by the sewing machine. The image can then be transferred by stitching it out in a short period of time.

Creating the embroidery is the simplest part of this entire process. However, it is not an easy process to Digitize Embroidery. This is a

complicated procedure where 3 sets of stitches are used â€“ fill, satin and running. These stitches make sure that the design is converted from the

print to embroidery in the easiest possible manner. The most difficult part of the digitizing procedure is to transfer the image into the format

that can be read by the sewing machine and then duplicated.

Just pressing the convert button is not the whole process. It is to be understood that not all of the images are compatible for being embroidered.

When the design is transferred, it has to be optimized manually with regard to the color, shape, line and other attributes so as to make it

compatible with the sewing machine. It can take several years to master the skill of transferring the design. Hence, when you choose an Embroidery

Digitizer for your work, make sure that you hire only an experienced provider.

When you want to get Custom Embroidery Design digitized, there are many factors that will decide the price. A large number of people consider that

the most crucial factor is stitch-count, but the fact is otherwise. It is the complexness of the design that is the most crucial factor. Every

hand embroider knows that stitching a large-sized design is going to take more stitches than a small and complex design, but it is easier to

complete the larger shape. This is also true for Embroidery Digitizing Service.

A simple picture is going to be easier to digitize. However, every image cannot be converted to embroidery pattern. It is to be understood that

embroidery is a different art form than most people think. Various forms of artwork are required in this process. An expert Embroidery Digitizing

provider may have the expertise to transform almost everything into an embroidery pattern. However, some pictures are better left as such in the

print.

If you want to transform images it would be better to develop a design based on the image, instead of going through the entire process of

transferring the image directly. Overall, the process to Digitize logo and images is an art form. Even though professional digitizers take minimal

time to complete the task, the procedure is highly complicated. But, the masterpieces created through Embroidery Digitizing cannot be imitated by

hand. Embroidery is an enthralling method to decorate your home, and digitization of embroidery makes it easy and more detailed than you can think

of.
