Article published on April 19th 2012 | Auto

Todayâ€™s vehicle safety features go beyond mere seatbelts and airbags. Airbags are now de rigeur in most vehicles, installed along the sides of the interior to protect both drivers and passengers. Meanwhile, seatbelts are mandatory across most regions in North America.

Some vehicles are now equipped with brake assist. Normally, when a driver hits the brakes, the car keeps on moving a few feet before coming to a complete stop. But with brake assist, the car is prevented from skidding too far once the driver slams on the brakes, thereby preventing collisions due to lack of control. This is particularly helpful if the vehicle in front of you stops without warning or if there a pedestrian crosses the road out of turn.

Antilock braking systems also make emergency braking safer and easier while reducing tire damage. With an antilock braking system, the tires gradually slow down instead of abruptly stopping. This makes it easier to get out of harmâ€™s way by enabling you to move to the side of the road.

If your vehicle does not have antilock brakes, or if you made a different maneuver to avoid a collision, you should ideally have roll stability control to help you out. This control keeps your vehicle from rolling over when you skid sideways by turning your wheels toward the direction you are going instead of turning away from it. This reduces loss of control and damage to your wheels and tires.

When visiting a Ford dealership Edmonton residents buy cars from, you may encounter some models with cruise control and traction control. While both features are designed for speed control, each has different purposes. Cruise control prevents a driver from going over the speed limit, while traction control prevents slips on wet, icy, or snowy roads. Like electronic stability controls, cruise and traction controls typically work in conjunction with antilock brakes.

Ford dealerships Edmonton residents visit are aware that increasingly erratic weather conditions make road visibility more difficult for drivers. They therefore recommend cars equipped with defrosters and anti-fog windows to enhance visibility. These features keep frost and fog droplets from blocking the driver's eyesight.

Rearview cameras and rear window wipers have similar functions on rear windows, especially those installed on vans, trucks, and SUVS available at Ford dealerships in Edmonton. Rearview cameras allow drivers to see the back from a closer range than rearview mirrors and alert them of any oncoming vehicles. Meanwhile, rear window wipers keep the panes clear in heavy rain.
