Ways to Recover Deleted Photos or Files by Josephine Yang

Article published on December 7th 2011 | Seo

Maybe you have erased some important photos or files accidentally or mistakenly in your computer, camera, USB drive, or anywhere else. However, very likely you do not know that usually these deleted photos or files can be restored no matter they are from your computer hard drives or camera memory stick. Now this article will discuss something about that.

What are the most typical reasons for the lost of photos or files?

1. Delete photos or files accidentally or mistakenly

2. Format the entire memory that holds photos or files accidentally or mistakenly

3. Encounter memory or hard disk corruption

4. Interface or file transfer errors

Why can we retrieve erased photos or files?

Restore data from hard disk drive, memory or other storage device is probably very common. Once you carelessly delete important photos, please be calm. There is a high probability to acquire removed photos back, but not to the physical damage.

In other words, when you get rid of a photo or file, or format a memory, the space where the photo was saved is not actually removed. On the contrary, that space is also "available", that is to say it may write a new photo or file there. Due to this, what you should remember is not to save any other photos or files to your hard drive or memory card in case the space will be overwritten by the new photos or files.

How to get back deleted photos or files?

Generally, computer system itself has any preventive measure for you to get back deleted files or photos. For example, Recycle Bin is the protection in Windows system. That means if you delete a file or photo, it is very easy for you to recover it by using the Restore function. If empty the Recycle Bin, it also does not matter. But right now you have to make sure that lost or deleted photos or files have not been overwritten by other information.

But if you really store some new photos or files on your hard drive or memory card, then opportunities are the erased files will be overwritten by the new ones that would make them unrecoverable.

Once computer system cannot find the lost photos or files, then you have to find a recovery tool to help you. With such a tool, you are able to recover deleted photos or files more easily. If you are worrying about your deleted files or photos, you may have a try.
