Learn More About the Steel, Ceramic and Diamonds 36mm Tag Heuer Watches by James Paul

Article published on July 5th 2012 | Shopping

Tag Heuer is a Swiss luxury watch manufacturer. The brand has gained popularity mainly for its chronographs and watches. Presently the brand has a huge collection of watches for men and women. Among the many Tag Heuer watches collections, Formula 1 happens to be the most popular one. Here in this article we will discuss about a particular model of Formula 1 collection. It is the steel, ceramic and diamonds 36mm timepiece for women that we are going to discuss about in detail.

A feminine yet bold 37mm case circumference in stainless steel gives a support to the Formula 1 bezel, which sets 84 Wesselton diamonds. Twelve deep black superior class ceramic inserts highlights the glistens by contrast, making the timepiece evocative of an alluring flower. The beautifully designed smooth bracelet with a feminine touch, the striking combination of polished stainless steel and black ceramic, is held safe and secure by the butterfly folding clasp, which is made of stainless steel.

The dial heart looks complete with the fifty-four shining Wesselton diamonds and ten stones, the date window at 3 and the 3-dimensional monochromatic logo. Every single diamond is set with four stainless steel beads. Polishing every jeweled part of this watch needs high level of skills to ensure that the setting provides utmost level of luster without loosening any of its stones.

So, like any other watches Tag Heuer watches also are popular for their features and functions. This particular model of Formula 1 collection has polished steel case and hands, ceramic fixed bezel, sixty-four Wesselton diamonds on dial, date window at three, eighty-four diamonds on bezel, a monochrome logo of the brand; polished steel bumpers, steel, crew-in crown, screw fitting case black and a scratch free sapphire crystal to provide excellent durability. The luminescent markets on minute and hour hands are legible easily underwater and in dark. The watch is also water resistant to 200m and the strict manufacturing standards and rigorous testing ensure this.

A quartz movement characterizes the timepiece. The movement is generally powered by battery. The regulator is a quartz crystal. The electric current causes crystal to vibrate consistently at a high frequency. This gives the movement a perfect precision. The quartz movement used by Tag Heuer watches is accurate and very reliable. They are made in the country of Switzerland and distinguished by outstanding resistance to magnetic fields and shocks. For more security, the brandâ€™s quartz timepieces except the chronographs are fitted with an EOL or end of battery life indicator. When the seconds hand begins to make four-second jumps in every 4 second, it means the battery is weakening. However, the quartz movement keeps on displaying the right time unless the battery gets exhausted.
