Integrating TV, Internet and Phone Services with Advanced Fiber-Optic Technology

by Robin Mackenzie

Article published on February 23rd 2012 | Technology

Having a fiber optic cable network at your doorstep is a sure way of getting an integrated service with all the three communication service included in a single package. If you have wondered how that is a distinct possibility, understand that nowadays technology permits these services to be transported through optic fibers under different frequencies. Availing the integrated services of any of the popular providers like Charter Deals ensures that there is interoperability without your even knowing it. It means benefits for customers. You can watch television and get advised about a telephone, watch television through your computer even as you surf the web or make a call to a near one while watching TV. Marvelous isnâ€™t it?

Itâ€™s not necessary to say that integrating TV internet and your home phone is one way to cut costs all the while satisfying your home based entertainment needs. You have plenty of plus points that come with combining the three. For one, you donâ€™t have to pay extra for your home phone Internet and TV connection. There are plenty of bundle deals that club all these three together and offer them at discounted rates. You can watch or listen to on demand stuff at very cheap rates and at super fast speeds. With an Internet connection, you can download a huge amount of data with smaller bill amounts. You donâ€™t have to spend extra for your mobile phone because home phones have cost effective plans.

Nowadays so many telecommunication providers are giving different varieties of services, where we can integrate our home phone with our internet connection. Different varieties of home phone packages available today includes benefits such as convenient calling features and nationwide calling. Some telephone companies are even giving the freedom to choose the service you need at the price you desire. We can see some of the benefits at a glance. They are caller waiting, three-way calling, speed dialing, caller ID, priority call, incoming call back, auto redial and call return. When you can get this entire feature by subscribing to a single connection, then why you have to choose a different service provider for your home phone?

Smart televisions which are popularly known as connection televisions or Hybrid televisions are the televisions that are used for integrating with internet and telephones. One must not confuse these televisions with Internet or web television as they are completely different from this type. Apart from having all the features of a modern television, they integrate with internet and one can access online interactive media, videos can all be accessed by having an integrated internet with it. The fundamental limitations to traditional televisions disappear when it comes to smart televisions. One can connect to social networking sites or access to downloads and check their status while watching a program on television!

Now if you have a fast speed internet service, you can always connect it to your cell phone or smart phone. It makes your internet experience quite awesome as you can check your mail and update your social networking status when you are at go. Suppose you need to book an airline ticket, just simply log on to your smart phone and book in a jiffy. No throttling or any other hindrance which you must have faced before as most service providers are trying to remove this disadvantage from their system. You can always download your favorite songs and movies in instant speed on to your cell phone. What more could you ask for?

We have now seen the benefits of integrating TV, Phone and Internet separately. Hence, getting each of these connect saves much of your time. The experience is splendid when it comes to combining all the three. One of the simple examples is the On Demand feature, where you can

record your favorite channels through your mart phones. Hence you donâ€™t have keep waiting for the channels. Likewise you can do this for lot of other things as well.
