There are Many Reasons for People to Wear Glasses with the Changing Trend

by Stuart Owens

Article published on February 16th 2012 | Technology

During the old days people used to wear glasses only when they did not have a clear vision. These were not many eye clinics and most people felt lazy to go a get their eyes checked. Of course some of the spectacles that the some of the kings and queens wore were good. However, most of them were heavy and cannot be worn by modern man. However, it is compulsory for a person to wear glasses if he is not able to read some letters. Today, there is a vast advancement in the technology and people have lots of other options like wearing contact lenses, getting surgeries done for their eyes and many others. Not being able to read or see cannot be the only reason for wearing glasses. Man has invented his own reason for wearing them on. However, many times it is essential to wear glasses and there can be an infinite number of reasons that can be stated to support this point. So let us look at some of the examples why people wear glasses and how they feel when they wear one.

The perception of wearing glasses differs from person to person. This difference occurs mainly due to the reason behind wearing the same. For example, one of relatives watches a lot of programs on his TV powered by ATT Digital TV. He was so much engrossed in watching his favorite programs that, he sits almost whole day long without even noticing what is around him. Due to this fact, his eyes started to trouble him. He started to lose some power in his eyes and was advised by the eye specialist to wear glasses. While most of the people around him had clear eye sight, he hated the idea of wearing one. However, he was forced and he had to wear the same for almost four years. At the end of the fourth year, after going through a lot of tests, conducted a laser treatment, he is now happy free from wearing his glasses. Years have passed now and people around him have glasses on their eyes. He has got a chance to make fun of those who used to make fun of him before. This could be one of the instances for not wearing glasses. However, today most people who have crossed their fifties have reading glasses in their pockets. These glasses are small and can be carried just like we carry our pen in our pockets. They are very light in weight as well. Most people use the same while reading newspapers or novels or any kind of books for that matter.

Today if you visit many companies, where the employees have to sit in front of their computer systems for hours together, it is very important for them to wear glasses. With the introduction of Anti-glare, people are now able to protect their eye sights from getting affected. Since a lot of heat and radiations are generated out of the computer systems and televisions, it is most important for people who use these continuously to wear anti-glare. There are different kinds of anti-glares available, and based on the price the quality also increases. These help the eyes from getting infected to a very large extent. Not only this, anti-glare can be worn when you are driving at night and this can protect your eyes from radiations from the vehicles passing in the opposite direction. Not only this, we also find people wearing sunglasses or coolers during the day time. This is also a good habit as you can protect your eyes from the radiations from the sun. The radiations from the sun are also harmful for the eyes especially in the modern days where people live in big cities.
