Planning to have a Surgery?

by Damian Walton

Article published on June 4th 2012 | Breast Cancer

Plastic surgery is the most frequently performed aesthetic surgical procedure. Multiple and varied options exist for obtaining an adequate body with a perfect shape. Success of a surgery depends greatly on the selection of the proper surgical procedure because correct procedure results in success of the surgery.

It should be noticed that different patient requires a different technique and many need several procedures during the same surgical session to obtain the best results as they can have multiple problems. Similarly, each procedure should be undertaken according to precise indications, depending on the aesthetic problem of the patient and the individual characteristics of the treated area. So this should be done with ultimate care as choosing the correct surgical procedure is the most crucial task of this procedure. The most important factors to be considered and then it should be analyzed to determine the best surgical procedure that is best for the patient and the combination of surgical procedures that will improve the thoracoabdominal contour for the same patient.

But there are certain risks in every type of surgery. These risks must be considered before going for the surgery.

Breast Augmentation and Breast Implants â€“ There are some risks of breast augmentation and breast implants such as infection, pain and bleeding. Hardening of scar tissue around implant can cause breast firmness, pain, distorted shape, or implant movement.

Eyelid Surgery â€“ Blurred vision, infection, bleeding, swelling, dry eyes and even blindness can be caused by this type of surgery.

Face lift â€“ Facelift can cause infection, bleeding under skin, scarring, irregular earlobes, nerve damage, numbness or inability to move your face, hair loss and skin damage.

Forehead Lift â€“ Forehead lift can cause eye dryness or irritation, impaired eyelid, function loss of feeling in eyelid skin and injury to facial nerve causing loss of motion or muscle weakness.

Lip Augmentation â€“ Infection, bleeding, lip asymmetry, lumping and scarring are the main problems that can be caused by lip augmentation.

Liposuction - Baggy skin, Change in the color of the skin, fluid retention, shock, infection, burning, fat clots in the lungs, pain, damage to organs if punctured, numbness at the surgery site, heart problems, kidney problems and disability are the main risks that come under this category.

Nose Surgery â€“ Nose surgery can cause infection, bursting blood vessels, red spots, bleeding under the skin and scarring.

Tummy Tuck â€“ Infection, bleeding, scarring, fluid accumulation under the skin are the few main problems of this surgery.

Some Non Surgical procedures are also having some risks factors. Main among them are as follows:

Botox Injection - Botox is injected into a facial muscle to paralyze it, so lines don't form when a person frowns or squints. This procedure also have some risks such as face pain, muscle

weakness, flu-like symptoms, headaches, loss of facial expression, droopy eyelids, asymmetric smile and drooling.

Dermabrasionâ€“ This technique is used to treat facial scars and heavy wrinkles. This procedure is also having some risks such as abnormal color changes, whiteheads, infection, allergic reaction, fever blisters, cold sores and thickened skin.

So the best cosmetic surgeon should be hired to experience minimum risks and best results.
