A Comprehensive Note on Under Floor Heating System by Julia Roger

Article published on June 5th 2012 | Business

The underfloor heating system was already in use in Roman era and was known as the "Hypocaust" reasonably different from current systems. But due to the poor insulation of buildings, the high temperatures of the liquid heating and lack of adequate control systems did aside this type of system for a long time. The energy crisis of the seventies and the adoption of European laws on the thermal insulation made possible the return to this type of heating. The various available plant solutions allow maximum flexibility and adaptability to any type of building and construction requirements, also the use of heat transfer fluid at low temperature together with the particular heat stratification in the environments results in a significant savings in energy.

underfloor heating offers a fantastic way to heat your floor in a comprehensive manner, without it being visible or using up often valuable wall space such as a radiator might.

The system is installed on top on your sub-floor, underneath your flooring, whether it is wood or tiled. Under floor heating can be installed either as your main source of heating for a room, or as a secondary heating source to keep the chill off the floor. Since heat rises, you can be sure youâ€™ll be getting the most from your heating system, without the energy rising to the ceiling before warming the room as you may find from most traditional heaters that rely on convection. It is widely understood that our feet are a natural thermostat for the body. If feet are nice and toasty, it is more than likely that so are the rest of us. Under floor heating systems offer a way to heat your room and your body from the ground up.

With good quality under floor heating solutions, you can be confident that you are not only getting a product that will work effectively, but also one that is easy to install, and will remove the need for a specialist installation or expensive tools. It is not only cost-effective, but also come with a lifetime warranty for your added peace of mind.
