A guide to hydraulic pumps by Julia Roger

Article published on March 14th 2012 | Business

You may not know it but hydraulic pumps are essential components in a range of industries and play a vital role in our day to day lives. They are not the most glamorous of purchases but are nonetheless very valuable pieces of equipment. Therefore it is vital to appreciate their importance:

Put simply, Hydraulic pumps are devices which propel liquids through systems of pipes. They are connected to other hydraulic parts such as hydraulic hoses, tanks and tubes. They work by building up pressure which forces a liquid through a system at a desired rate.

Pretty much any liquid which we come across will have been processed by hydraulic pumps. Water is the obvious answer but things like soft drinks as well as milk and fruit juice processed in a commercial property or facility will have gone through some sort of pump. Hydraulic pumps are also used in the refinement and distribution process of oil and petrol. As you can imagine, they are used to convey billions of pounds worth of material the world over on a daily basis.

There are all sorts of different types of hydraulic pumps which vary in shape, size and design. The choice of pump depends on the application of the piece of equipment in question. For instance a static piece in a sewage treatment facility will be different from a component used in irrigation. Hydraulic pumps used in fire extinguishing systems and fire engines will differ from other units too. Variables which need to be considered include the pressure which you want the liquid in question being propelled through the system.

Where can I find a dependable supplier of high quality hydraulic pumps?

If you are currently on the lookout for high quality hydraulic pumps then you should make the effort to locate a well respected company with a proven track record in the industry. One firm that fits the bill can be found at the website Redlinehydraulics.co.uk. The company stocks a comprehensive range of hydraulic pumps and also supplies other related components such as hydraulic hoses so get in touch today for more information.
