Airplanes and their types by Uhdakota

Article published on July 13th 2012 | Business

Helicopters are a very important means of travelling. They are convenient and can cover long distance faster as compared to other means of transportation. They can be used for personal uses or even for government related tasks. One famous model of helicopters is AS 350. People in air force or other government departments very well know its importance. It can easily be seen at spots like hospital landing pads, heliports, police department operation centers and other places across the entire United States. With several features like super visibility, in built maneuverability and low vibration levels in the cabin it has earned a lot of reputation around the globe. It is a single engine workhorse which is considered as the best performer from within its category. It can easily accommodate approximately five to six passengers in all the forward facing seats. It contains a powerful T53 Turbine Engine which makes it powerful. The interior noise in the hover is a maximum of 73 dB and in the forward flight at 110 kts is approximately 77 dB, which is very less.

They are mechanically simple, robust and easy to operate. No high level training or education is required to operate it. They are relatively light weighted as compared to its other competitors. All these attributes have raised its demand even more. It has a range of up to 360 nautical miles just with the power of 732 shp. It is the safest and the most cost-effective way to provide air medical services throughout the nation.

In case of medical emergency, it can easily carry one pilot, a patient and two attendants at a time along with the necessary medical equipments. It has attracted huge number of clients in the world but one of its most recognized customers is Air Methods Corporation, which is the largest air medical transportation service provider throughout United States.From the beginning of 2011 it is considered to be the best as compared to T55 because it has been offering fast cruise speed, longer engine TBOs, 30 minute take-off power, improved tail rotor controls and lower DMCs.Many popular government approved companies have the legal authorization to manufacture them along with their spare parts. The new ones are a bit costly, that is why the used helicopter parts that are in a better condition are sometimes put on sale. You can easily buy them and get them installed in your huey. Donâ€™t forget to buy the genuine parts.
