Assessing Top-of-the-line SCIF Equipment and Services by [VanPey](#)

Article published on May 18th 2012 | [Business](#)

Federal agencies handle tasks and information crucial to national and public interests. For example, the military deals with classified and restricted data that, if disclosed to unauthorized individuals, will put national security at risk. To protect such high-priority documents, federal agencies use a Sensitive Compartmented Information Facility (SCIF), an area where sensitive compartmented information can be safely discussed, stored, or processed. Apart from conventional onsite SCIFs, however, agencies also need the following SCIF-related equipment and services.

Mobile Command Center

Most high-class federal agencies have their own in-office SCIF. Nevertheless, small-time ones may not have the luxury or the funds to secure one for their organization. Mobile command centers serve as an organization's SCIF on wheels. These have similar equipment and capabilities essential in a customary SCIF, but with the extra advantage of being portable and flexible. These can be deployed in emergency or disaster situations, as long as there is ample power and communications in those areas.

Container

Quality container for SCIF units is one of the most cost-effective information security options. While some individuals use these containers as their homes, others apply them for SCIF-related operations. Developers and service providers construct these units while ensuring habitability and physical security factors. After all, the occupants should also be comfortable and protected from the elements to successfully execute their special tasks.

Trailer

Like mobile command centers, strategic SCIF facility trailers also feature optimal portability and flexibility benefits. These can be deployed rapidly to any area through logistic conveyances. Simply plug in power and communication devices and they're ready to use. Owners can also configure these facilities to suit habitability and convenience requirements.

Modular Office

A purpose-built modular office can also be constructed as an SCIF. This pre-fabricated solution provides flexibility in sizes and configurations. Rather than having an onsite SCIF, an organization can opt for this option. It is tested prior to delivery to ensure high standards of construction are met and features are fully accredited. A self-contained SCIF unit eliminates site congestion, time onsite, and construction disruption while facilitating task expediency and mission success. A modular office SCIF can also incorporate kitchens, bathrooms, sleeping quarters, and other basic habitability needs for staff convenience.

Consulting

Those interested in having a military SCIF can consult local experts or go online for additional information. Different SCIF solution providers offer a broad range of products and services such as the abovementioned ones. They also offer consulting services for organizations looking for the right SCIF solution that fits their requirements and preferences.
