Auto of Your Choice: Driving with Your Burlington Car by Clint Moore

Article published on March 6th 2012 | Business

As the most populated province in Canada, Ontario can grant a unique driving experience compared to others. Partly owing to its population of more than 13 million, traveling in its metropolitan areas can set quite a test-- think of a considerably large number of people and narrow parking spaces. Then again, those same factors help you to soak in a definitely vibrant culture.

Engaging yourself in the neighborhood setting can spell out a lot of things, and this can include taking leisurely drives. When choosing a car, think of the location where you will be using it the most: city or rural areas. Even though cars in general can match to any fairly normal driving condition, some automobiles are more appropriate than others on either circumstance. Choosing the right automobile can also help you cut back on fuel and other car-related expenses. Here are a few things to think about on buying a car that can tour you around the city.

Specifications: When you think about a city like Toronto or Ottawa, it's safe not to estimate elbow room particularly when you maneuver the vehicle. In such cases, it's practical to have a car that fits even in the tightest parking spots. Sedans and convertibles are definitive choices for city driving and parking since their sizes are usually the typical for most parking areas. Always take note that bigger is not always better-- and the same thing holds true when crossing city routes.

Transmission: City driving often includes keeping speed limits and experiencing the periodic rush hour, prompting motorists to take it slow and easy. Stick shifts may provide you the edge in fuel efficiency, but switching gears very often can be tiresome. On the other hand, the automatic option can do the shifting for you, though it is known to be costly in fuel. Ask Burlington car dealers which of the two options meet your needs better.

Parking assist: The parking assist function lets car owners know whether or not their vehicle is closing in on an object during parking. Normally, it comes as a set of sensing units installed on the rear bumper of the vehicle. When the sensors identify an object close to it, they will deliver the signal to the system, alerting the driver like an alarm. Some advanced Burlington used cars have this function.

Mileage: The value of having a car that is fuel efficient shouldn't be neglected. Thinking about the standstill traffic that can sometimes be expected, city driving can mean a lot of fuel usage, even on a short trip. Burlington auto sales establishments generally provide pertinent data on fuel economy. Ask your dealer or check out their website to find out more on fuel consumption rate.
