Automotive disasters explained: Automatic gearbox problems

Automatic gearbox problems are an unfortunate but unavoidable fact of life for many car owners all over the country. Many people groan when they find that their transmission is malfunctioning as they anticipate they will be the recipient of huge repair bills but this is not always the case. Here is a quick guide to automatic gearbox problems:

Now you may detect automatic gearbox problems if your car does not stay in gear or the changing of gears is harsh or delayed. Alternatively it could make a funny noise such as a buzzing sound from the automatic gearbox itself or a clunking sound during shifting. There are many different issues which can arise so the extent of the repair (and consequently the cost of the job) can vary greatly. For instance there may be a minor problem with the external controls on the transmission. The vast majority of vehicles these days are controlled by a central computer brain which can be remapped or replaced if it is the source of your automatic gearbox problems. Alternatively there may be the failure of a minor exterior component causing your gearbox to malfunction, which is relatively straightforward to sort out.

However many automatic gearbox problems are much harder to resolve. If the faulty part is an internal component within the transmission troubleshooting can be a timely (and therefore costly) process. A funny noise in particular indicates that a part has worn out or that the fluid level is too low or there is insufficient fluid pressure, which both require invasive work.

However even if you and your pride and joy are suffering from one of the many automatic gearbox problems that can occur then rest assured that help is at hand â€“ there are specialists who can diagnose and solve the particular problem without charging an astronomical price.

If you do encounter any automatic gearbox problems then one firm which is on hand to help can be found at Automatic-gearbox.co.uk. The business provides much need assistance and boasts first class automatic gearbox equipment so visit the company website today for more information.
