Avail Quality Data Center Services with Data Foundry by Henry Hernandez

Article published on April 27th 2012 | Business

Data Foundry is known for its steadfast IP and network services and it also offer expert support, installation, and migration services and it ensure that a company can get affordable data center solutions.

Established in 1994, Data Foundry was the foremost Internet Service Provider (ISP) in San Antonio. It also holds a position among the top 50 ISPs in U.S. It works as a data center and supported a number of companies in almost all industries, which include energy, performance computing, technology firms, healthcare, and financial services. This company makes sure that the businesses of other companies operate smoothly all the time.

Comprehensive data center solutions

Data Foundry also put forward all-inclusive retail and wholesale data center outsourcing, disaster recovery solutions and collocation services through its facilities in Houston, Texas and Austin. The expert and trained team of this ISP make sure that all your data center needs are fulfilled in the best way possible. The staff understands all the facets of data center jobs from complicated power management to cross connect. They also provide assistance for CFD analysis, space planning, migration, and installation.

Expert team

The experts of the team are accessible round the clock to provide the support you need. The staff also makes all possible efforts to develop practical and flexible solutions for other companies, no matter whether they need a multi-megawatt solution or they need just one cabinet. The trained experts consider all the details very carefully to make sure that the best quality product is offered to businesses.

Highly reliable data center

Data Foundry also constructed the Texas 1data center on Data Ranch, which started operating from July 2011. The company used all its experience in building this secured, connected, and redundant data center in Texas. The Data Ranch where Texas1 is located is a 40-acre site build in a region, which has fewer incidences of natural disasters. In this way, it put forward a dependable environment for back up and production IT infrastructure.

Other services offered

Texas 1 was mainly designed for fulfilling high performance computing needs. It offers water-cooled cabinets, which are capable of satisfying power densities ranging up to 50kW for one cabinet. These cabinets can also be scaled to support higher wattage requirement for future technology. Data Foundry also makes sure that you can get better reliability and competitive prices. It even offer blended internet service that provide you access to many carriers at the same time. This is not all, as it also provides data suits built accurately to suit the needs and specifications of a business as well as secure cages to meet the growth of a business. The internet services on offer are also backed by fully outmoded network to provide customers uptime and scalability required.
