Article published on February 13th 2012 | Business

There are a lot of reasons as to why you must recycle cartridges. Throwing away empty cartridges can cause damage in three ways. First it causes health hazards. Insecure discarding or disposing creates danger to the surroundings. Dangerous discard of toner ink has severe health danger such as irritation, swelling, redness of skin. If there is extended breathing, it may cause irritation in the respiratory organs.

Secondly, there is environmental destruction. If you throw away empty cartridges, it may pose a threat to living organism underground such as plants, insects etc. The used toner cartridge doesnâ€™t decompose easily as studies have shown that it takes approximately one thousand years for toners to decompose. The third danger is the economic harm.

These days toners are made up of 65% to 75% of Styrene Acryl ate Copolymer which consists of black carbon in it. A little amount of heat receptive plastic and aluminum are in addition utilized. All such items are costly; therefore it is a great loss in economy when they are discarded into dustbins after you have used them. Therefore in order to avoid these damages, one must recycle cartridges.

Majority of the firms would help you in doing so. These firms take your cartridges and recycle them. A lot of companies even give money in order to take your empty cartridges. The process of recycling comprise of sending the unfilled toner to the company which recycles it. These firms divide the components of the cartridge, tidy them completely, fill up the cartridge and reproduce it. For instance, in England around fifteen percent of empty cartridges are used again.

Moreover, cartridges when burn can be extremely dangerous to the environment. First of all one must look at the packaging of the cartridge. A lot of manufacturers of ink provide their own program of recycling and this is the simplest way to cartridge recycling. If you donâ€™t have the covering or there is no sort of information printed on the wrapping, you should check the website of the producer.

Most of the times, it is possible that they might have started the service after you have bought the cartridge. Most of the times, you would have to drop the cartridge at the company or they might pay you for empty cartridges and pick the empty ones from your home. We all must be careful as to how we dispose off our waste.

We all contribute towards the society and the betterment of the environment therefore we are obligated to take care of empty cartridges as well. The advantage of the firm who pay of empty cartridges is that it reduces their cost of manufacturing a new one. If you donâ€™t feel like keeping the money you get from these firms in return of recycling cartridges, you have the option of giving it in charity as well.
