Article published on March 6th 2012 | Business

Ontario, as the most populated area in Canada, offers a noticeably different driving experience compared to neighboring provinces. Partly owing to its inhabitants of more than 13 million, commuting in its municipal areas can set quite a challenge-- think of a considerably big number of people and narrow parking spaces. On the other hand, those same factors allow you to soak in a definitely vibrant culture.

Engaging yourself in the local setting can spell out a number of things, and this can include taking leisurely rides. When choosing a car, think of the place where you will be using it the most: city or rural areas. While cars in general can match to any fairly normal driving condition, some automobiles are better suited than others on either scenario. Choosing the right vehicle can also help you conserve on fuel and other car-related expenses. Below are a few factors to consider on selecting an automobile that can tour you around the city.

Body: When you think about a city like Toronto or Ottawa, it's safe not to expect elbow room specifically when you park the vehicle. In this instance, it's wise to have a car that fits even in the smallest parking areas. Sedans and convertibles are definitive choices for city driving and parking because their sizes are usually the standard for most parking areas. Always take note that bigger is not at all times better-- and the same thing is true when traveling city routes.

Transmission: City driving often includes maintaining speed limits and experiencing the periodic rush hour, encouraging people to take it slow and easy. Stick shifts may provide you the edge in fuel efficiency, but switching gears very often can be tiresome. Meanwhile, the automatic option can do the shifting for you, although it is known to be costly in fuel. Inquire Burlington car dealers which of the two selections meet your needs better.

Parking assist: The parking assist feature lets motorists see whether or not their car is closing in on an object during parking. Most of the time, it comes as a set of sensors placed on the rear bumper of the car. When the sensors identify an object close to it, they will send the signal to the system, alerting the person like an alarm. Some modern Burlington used cars have this component.

Mileage: The importance of getting a car that is fuel efficient shouldn't be overlooked. Considering the standstill traffic that can sometimes be expected, city driving can mean a lot of fuel consumption, even on a short trip. Burlington auto sales establishments typically offer essential data on fuel economy. Ask your dealer or go over their website to find out more on mileage.
